The MAXQ family of 16-bit reduced instruction set computing (RISC) microcontrollers is targeted toward low-cost, low-power, embedded-application designs. The flexible, modular architecture design used in these microcontrollers allows development of targeted designs for specific applications with minimal effort. Microcontrollers in the MAXQ family provide many different combinations of program memory, data memory, and peripherals while supporting a common feature set. This shared functionality provides maximum reusability for hardware and software systems developed using these microcontrollers.

MAXQ2000 Evaluation Kit

The MAXQ2000 Evaluation Kit (EV kit) is a proven platform to conveniently evaluate the capabilities of the MAXQ2000 low-power LCD microcontroller. The kit contains the MAXQ2000 with pins brought out to headers, a JTAG programming interface, fixed and adjustable power supplies, a DB-9 serial connector, an LCD display, and switches and LEDs to control and display board operation. **Kit Includes:** • MAXQ2000 Evaluation Kit Board • Serial-to-JTAG Interface Board • JTAG Cable • MAXQ2000 LCD Display Daughterboard • MAXQ2000 Evaluation Kit CD-ROM

MAXQ2000-KIT-ND	Evaluation Kit for MAXQ2000	**$174.90**

MAXQ3120 Evaluation Kit

The MAXQ3120 Evaluation Kit (EV kit) is a proven platform to conveniently evaluate the capabilities of the MAXQ3120 dual analog-to-digital converter (ADC) microcontroller. The kit contains the MAXQ3120 with the ADC inputs and spare GPIO pins brought out to headers, a JTAG programming interface, an on-board 3.3V power supply, and a 3.5 digit LCD. **Kit Includes:** • MAXQ3120 Evaluation Board • Serial-to-JTAG (MAXQJTAG) Interface Board • Serial Cable • JTAG Cable • MAXQ3120 Evaluation Kit CD • Third Party Compiler Tools Evaluation CD

MAXQ3120-KIT-ND	Evaluation Kit for MAXQ3120	**$174.90**

FDI LCD Demo Kit

The LCD Demo Kit is a reference design for a low-cost microcontroller and LCD solution. The Demo Board is controlled by a simple two-button user interface (MODE and SELECT).

The Demo Board CD includes example code for several sample applications: An FM Radio display during a simulated channel scan, a 15 minute count down timer, a repeating pattern of 4 text lines and a scrolling message window. The user can edit this code and download to the reprogrammable Flash microcontroller via a 10-pin header included on the board using any external ICP style programmer.

622-1003-ND (LCD-DEMO-KIT)	**$49.00**

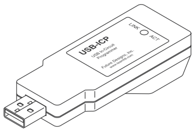
PCA9633 Demo Board

The PCA9633 Demo Board demonstrates the NXP PCA9633 Fast Mode Plus 4-bit I^{2}C LED Driver IC. Four LEDs are connected to the PCA9633 and through individual pulse width modulation (PWM) of each LED show different levels of intensity. The board supports six different modes of operation including color wash and random color. The on-board Flash microcontroller is also user reprogrammable for endless variations of functionality. It also includes high-current FET drivers for off board LED circuitry. Power can be supplied by either the onboard 9 VDC battery or through the external power connector.

622-1004-ND (PCA9633DEMO)	**$69.00**

Programmer Kits

USB-ICP supports In-Circuit Programming or ICP mode on NXP's microcontroller families such as the LPC9xx, 80C51, and ARM7. In-Circuit Programming uses a two-wire serial interface to program and erase ICP enabled microcontroller devices without removing them from the system. A small connector is all that is needed to interface your application to the USB-ICP programmer.



Supports: NXP's P89LPC900, P89C51, and ARM7 families of micro-controllers

Features: • USB port power so no external power supply required • Supports USB 2.0

Includes: • USB-ICP dongle • 18" cable for direct connection to board • ICP design guide

622-1001-ND (USB-ICP-80C51ISP)	**$69.00**
622-1002-ND (USB-ICP-LPC9XX)	**$69.00**
622-1005-ND (USB-ICP-LPC2K)	**$69.00**

No-Bottleneck - Extremely High-Bandwidth MCU with Ethernet, USB, & CAN interfaces

Why re-invent your code?

NXP makes your design experience better by providing you:

- Consistently higher-performance peripherals with deeper buffers and better functionality
- Coherent internal architecture using standard cores, peripheral blocks, and internal busses
- Faster 0-wait-state Flash memory, no-bottleneck, high-bandwidth interfaces, and better DMA engines

All of which make code re-use easy and assist you to focus on improving your design within your too-short development cycle.

128/256/512-KB ISP/IAP 128-b wide FLASH	E-ICE/RTM interface embedded trace macrocell
16- to 40-KB SRAM	Enhanced vectored interrupt controller
16-/32-bit ARM7TDMI-S core	
Power management, Watchdog timer, internal RC, PLL	
10/100 Ethernet MAC with 16-KB SRAM	CAN 0, 1
USB 2.0 full-speed device with PHY, DMA, and 4-KB RAM FIFO	General-purpose DMA controller
8-channel/10-bit A/D converter	1-channel/10-bit D/A converter
Capture/compare timer 0, 1, 2, 3	PWM 0, 1
UART 0, 2, 3 UART 1 with modem control	SD/MMC card interface
I^2S	I^2C 0, 1, 2
SSP 0, 1 SPI 0	RTC with 2-KB battery RAM
I/O Ports (70) (104 for LPC2378)	

Ordering information

Type number	Package	Flash (KB)	Total SRAM	External bus	CAN	SD/ MMC

High-Performance Features	LPC23xx	LPC24xx
72Mhz ARM7TDMI-S		
Flash **(0-wait up to 72Mhz)**	up to 512KB	up to 512KB
SRAM	up to 58KB	up to 96KB
Battery-backed SRAM 2KByte		
External Memory Controller	8-bit MiniBus	non-multiplexed 32-bit
Ethernet 10/100 MAC w/DMA	Reduced MII	RMII and MII
USB 2.0 Full Speed w/DMA	Device w/PHY	Host and Device w/PHY
USB 2.0 On-The-Go controller	no	yes
CAN2.0B (two channels)	yes	yes

Common to both families:

On-chip RC-oscillator — 4Mhz **trimmed to 1%**
Four 32-bit general purpose **timers**
PWM block supporting 3-Phase Motor Control
Watchdog timer from multiple clock source options
ADC 8 channel x 10-bit and 10-bit **DAC**
Low-power **Real Time Clock** with 2 KB SRAM and battery back-up
3x General purpose DMA controllers
High-speed Serial: I^2S (digital Audio), 3x I^2C, 3x SPI/SSP, 4x UARTs
SD/MMC memory card interface
Single 3.3V power supply (3.0 to 3.6V)
Multiple Power-Down Modes

10/100 Full-Duplex Ethernet

Option of full Media Independent Interface, or Reduced MII. Multiple DMA channels & large buffers ensure full bandwidth.

True USB 2.0 and True Full-Speed

Only **NXP** ARM Microcontrollers support all modes and all 32 endpoints. The NXP ARM-based USB interfaces give you better than 8Mbps data throughput (8x performance over competitor's FS USB). Larger buffers and Multi-DMA channels prevent data-bottlenecks and off-load the processor; freeing you to do more with your application code.

Dual CAN 2.0B

Two certified CAN 2.0B interfaces provide robust communications support for many products including industrial, medical, transportation, and sensor interface. Recognizes all 11- and 29-bit identifiers.

Dedicated and General, Multi-channel DMA

Supporting scatter-gather, big-little endian swap, memory-to-memory, peripheral-to-peripheral, memory-to-peripheral, and peripheral-to-memory transfers on multiple channels, and a wealth of additional features; the LPC23xx makes it easy to keep your code focused on your application - not on pushing data around.

Why waste cycles paging code to RAM, servicing peripherals with small buffers, or managing interface data transfer?

NXP Semiconductors has always provided the widest range of internally-compatible, highest-bandwidth, ARM-based MCUs available: (63-MIPS) LPC2101 - through the (220-MIPS) ARM9-based LPC3180 family, all with 0-wait-state flash and consistent internal structure and features, to further protect your code investment, maximize the value of your development schedule, and help you give your products the advantages they require.

LPC2000/LPC3000/8051 Microcontrollers

LPC2000 ARM7 Microcontroller

The LPC2000 architecture is based on a 16/32 bit ARM7TDMI-S™ CPU with real-time emulation and embedded trace support. A 128 bit wide memory interface and a unique accelerator architecture enable 32 bit code execution at maximum clock rate. For critical code size applications, the alternative 16-bit Thumb™ mode reduces code by more than 30% with minimal performance penalty. Due to their tiny size and low power consumption, these microcontrollers are ideal for applications where miniaturization is a key requirement. **Features:** • 16/32 bit ARM7TDMI-S processor • Up to 8/16/32/40/64 kB on-chip Static RAM • In-System Programming (ISP) and In-Application Programming (IAP) via on-chip boot loader software • Vectored Interrupt Controller with configurable priorities and vector addresses • Embedded ICE-RT interface enables breakpoints and watch points. Interrupt service routines can continue to execute whilst the foreground task is debugged with the on-chip RealMonitor™ software. • Embedded Trace Macrocell enables non-intrusive high speed real-time tracing of instruction execution • Multiple serial interfaces

LPC3000 ARM9 Microcontroller

The LPC3180 is based on the ARM926EJ-S core and offers a hardware vector floating-point unit for speed and efficiency. An integrated USB OTG interface with full host capability lets this high performance microcontroller connect directly to PDAs, smart-card readers, and printers. The large array of peripherals available on chip also include UARTs, SPI, I2C, a real-time clock with a separated power domain, and NAND Flash and DDR memory controllers.

Development Tools for LPC2000

LPC21++ Evaluation Board

The Keil MCB2100 Evaluation Board introduces you to the NXP LPC2100 ARM family and allows you to create and test working programs for this advanced architecture. Two CAN and two serial interfaces are available. Debugging is supported via the JTAG interface and the Keil ULink USB-JTAG adapter. An evaluation copy of the Keil ARM development tool is included.

Applications: LPC2129/2119/2124/2114 product families

Includes:
- Evaluation Kit for LPC2100 (w/LPC2129)
- ULINK JTAG Debugger
- Development Software

568-1755-ND	Eval Board/ULINK JTAG LPC210XARM	**$337.50**

LPC2106 Evaluation Board

The evaluation board is populated with an LPC2106 device and features 2 serial ports, 2 user-defined buttons, 16 fully configurable LEDs, 20-pin JTAG interface connector as well as breakout headers for all pins. The kit also comes with a 32K code-limited version of IAR's Embedded Workbench, including IAR's ARM compiler and C-SPY debugger as well as a free license of the IAR MakeApp code generator for the LPC210x.

Applications: LPC2106 family

Includes:
- Development board (w/LPC2106)
- Development Software

568-1756-ND	Eval Board for LPC210x ARM MCU	**$163.50**

LPC213x Evaluation Board

The Keil MCB2130 Evaluation Board introduces you to the NXP LPC2130 ARM family and allows you to create and test working programs for this advanced architecture. Two serial interfaces, a speaker, analog input (via potentiometer), and eight LEDs are available. Debugging is supported via the JTAG interface and the Keil ULink USB-JTAG adapter. An evaluation copy of the Keil ARM development tools is included.

Applications: LPC213x family

Includes:
- Development Board (with/LPC2138)
- Development Software

568-2095-ND	Evaluation Board for LPC213x	**$163.50**
568-2096-ND	Evaluation Board + ULink LPC213x	**$337.50**

LPC214x Evaluation Board

The Keil MCB2140 Evaluation Board introduces you to the NXP LPC2140 ARM family and allows you to create and test working programs for this advanced architecture. An on-chip USB interface, two serial interfaces, a speaker, analog input (via potentiometer), and eight LEDs are available. Debugging is supported via the JTAG interface and the Keil ULink USB-JTAG adapter. An evaluation copy of the Keil ARM development tools is included

Applications: LPC214x family

Includes:
- Development Board (with/LPC2148)
- Development Software

568-2097-ND	Evaluation Board for LPC214x	**$163.50**
568-2098-ND	Evaluation Board + ULink LPC214x	**$337.50**

LPC2148 IAR KickStart Kit™

IAR KickStart Kit for Philips LPC2148 contains all the necessary hardware and software and allows you to design, develop, integrate and test your applications.

Applications: LPC2148 family

Includes:
- LPC2148 Evaluation Board
- Development Software
- J-Link-KS JTAG Interface

568-2099-ND	Eval Board/JLink LPC214x ARM	**$337.50**

LPC229x Rapid Development Kit

The phyCORE-ARM7/LPC229x Rapid Development Kit supports high-performance LPC2292 and LPC2294 ARM7TDMI-S devices from Philips with external bus interface.

PHYTEC Rapid Development Kits enable immediate and successful start- up of our insert-ready Single Board Computers.

Applications: LPC2292 and LPC2294 families

Includes:
- Single Board Computer Module
- Development Board
- Ethernet Adapter
- Serial Cable
- AC adapter
- PHYTEC Spectrum CD including SBC hardware manual, evaluation compiler, software demos and Controller User Manual

568-1757-ND	Eval Board for LPC220x ARM MCU	**$343.50**

LPC23xx Evaluation Board

The Keil MCB23XX Evaluation Board introduces you to the newest NXP LPC2300 ARM7-based family and allows you to create and test working programs for this advanced architecture.

Two serial interfaces, a speaker, analog input, two CAN interfaces, LCD, USB, Ethernet, and eight LEDs make this board a great starting point for your next ARM project.

Applications: LPC23xx family

Includes:
- Evaluation Board
- Software

568-3999-ND	Eval Board LPC23xx	**$223.50**

Development Tools for LPC900

MCB900 Evaluation Board

The Keil MCB900 Evaluation Board is a versatile and flexible prototype board for the NXP P89LPC93x microcontroller family. The MCB900 includes the Keil µVision2 LPC Development Studio which allows you to create and debug programs that you can program into the on-chip Flash ROM using FlashMagic.

Applications: P89LPC93x family

Includes:
- MCB900 Evaluation Board (w/P89LPC932)
- µVision2 LPC Development Studio

568-1758-ND	Eval Board for LPC93x MCU Family	**$75.00**

EPM900 In-Circuit Debugger/Parallel Programmer

The Keil EPM900 Emulator supports in-circuit debugging and parallel Flash ROM programming for the NXP P89LPC9xx device family. The EPM900 connects directly to the µVision2 Debugger which provides full control over the user program execution. The Keil EPM900 Emulator includes the µVision2 LPC Development Studio which contains all the tools you need to generate small LPC applications.

Applications: P89LPC9xx family

Includes:
- EPM900 Emulator Board
- µVision2 LPC Development Studio
- USB Cable

568-1759-ND	Emulator Debugger/Programmer LPC9x	**$223.50**

PDS900 Emulator/Programmer

The PDS900 is a fully featured in circuit emulation and programming system supporting the entire NXP P89LPC900 family of high performance microcontrollers. It allows complete control and tracing of execution of a users program and access to all registers and memory spaces of the target microcontroller, without consuming any device resources or introducing wait-states or other non-standard behavior. It also allows programming of the Flash program memory and configuration options of production microcontroller devices.

Applications: P89LPC9xx family

Includes:
- PDS900 emulation and programming system
- Emulation footprint adapters for TSSOP20, TSSOP28 and PLCC28 packages

568-1760-ND	Emulator Programmer LPC9x MCU	**$673.50**

TEXAS INSTRUMENTS Flash Emulation Tools

A powerful tool that includes the hardware and software required to complete much of your application development work. The flash memory can be erased and programmed in seconds with only a few keystrokes, and since the MSP430 Flash is extremely low power, no external power supply is required. The tool has an integrated software environment and connects directly to the PC which greatly simplifies the set-up and use of the tool.

MSP-FET430P120: **Applications:** MSP430F11x1, MSP430F12x, MSP430F11x2 and MSP430F12x2 product families **Includes:** • MSP430F12x FET development board with 28 SOIC ZIF socket, LED indicator, FET to PC cable and header pinouts for prototyping • Two F1232 flash devices • Two MSP430F123 flash devices • Integrated IAR Kickstart user interface which includes assembler, linker, simulator, source-level debugger and limited C-compiler • Full documentation on CD-ROM

MSP-FET430X110: The Flash Emulation Tool (FET) supports complete in-system development and is available for all MSP430Fxx Flash devices. Programming, assembler/C-source level debug, single includes IAR Kickstart IDE, assembler, linker, simulator and 2-kB C-compiler **Includes:** • MSP430F11x(1) FET development board with 20-SOIC ZIF socket, LED indicator, FET to PC cable, and header pinouts for prototyping • Two MSP430F1121 flash devices • Integrated IAR Kickstart user interface which includes assembler, linker, simulator, source-level debugger and function limited C compiler • Full documentation on CD-ROM

MSP-TRF6903-DEMO: This kit is used to demonstrate a bidirectional radio frequency (RF) data link without the need of an external computer and for prototyping by downloading new software code to the MSP430F449 through the JTAG connector. The schematics and layout of the board can be used as a reference design if desired. **Features:** • TRF6903 RF transceiver • MSP430F449 microcontroller • JTAG connector • RS-232C connector • On-board PCB antenna

296-16696-ND	MSP-FET430P120	**$126.84**
296-13850-ND	MSP-FET430X110	**$55.66**
296-17300-ND	MSP-TRF6903-DEMO	**$190.89**

TMS370C756A 8-Bit Microcontroller

The TMS370Cx5x family of single-chip 8-bit microcontrollers provides cost-effective real-time system control through integration of advanced peripheral function modules and various on-chip memory configurations. This device is implemented using high-performance silicon-gate CMOS EPROM and EEPROM technologies. The low-operating power, wide-operating temperature range, and noise immunity of CMOS technology, coupled with the high performance and extensive on-chip peripheral functions, make the TMS370Cx5x devices attractive in system designs for automotive electronics, industrial motor control, computer peripheral control, telecommunications and consumer application.

- **Maximum Clock Frequency:** 20MHz
- **Operating Temperature:** -40°C ~ 85°C

Memory Size								Price Each

MSP430 USB Development Stick

Complete Development Tool including all the hardware and software to evaluate the MSP430F2013 and develop a complete project in a convenient USB stick form factor. It uses the IAR Embedded Workbench Integrated Development Environment (IDE) to provide full emulation with the option of designing with a stand-alone system or detaching the removable target board to integrate into an existing design. The USB port provides enough power to operate the ultra-low-power MSP430 so no external power supply is required.
Features: • Development Tool including a USB debugging interface and detachable target board • LED indicator • Removable USB stick enclosure • Debugging interface supports development with all MSP430F20xx devices • Integrated IAR Kickstart user interface which includes an assembler, linker, simulator, source-level debugger and limited C-compiler • Full documentation on CD-ROM

296-20630-ND (EZ430-F2013) **$25.62**

MSP-EVK430S320 Evaluation Kit

The MSP-EVK430S320 evaluation kit supports the MSP430x32x family of devices and comes with the PMS430E325FZ (UV EPROM) assembled in a socket.

Kit Includes:

- MSP430 EVK board with UV erasable EPROM, LCD, PC connector
- MSP-PRGS430 serial programming adapter
- IAR Kickstart IDE, assembler, linker and limited C compiler
- CD-ROM with software tools and complete documentation

296-13849-ND MSP-EVK430S320 .... **$511.19**

MSP-PRGS430 Serial Programmer

This serial programming adapter is a second-generation programming tool that can be used to program any MSP430 Flash, OTP or UV-EPROM device. These devices can be programmed in-circuit or in stand-alone sockets and software is included to facilitate device programming.

- *Power supply not included. Recommend T924-P5P-ND*

Applications:
MSP430 Flash, OTP or UV-EPROM device

Includes:
• MSP-PRGS430 programmer • Serial cable • Target cable • CD-ROM • Documentation

296-16698-ND MSP-PRGS430 .... **$254.96**

MSP-TRF4903-DEMO Evaluation Kit

The MSP-TRF4903-DEMO kit is used to demonstrate a unidirectional radio frequency (RF) data link without the need of an external computer and for prototyping by downloading new software code to the MSP430F449 through the JTAG connector. This kit is used to evaluate the Texas Instruments TRF4903, a single chip multiband RF transmitter. The schematics and layout of the board can be used as a reference design if desired, limited by the software system parameters of the demonstration firmware.

Kit Includes:

- One TRF4903 demonstration board (transmitter)
- One TRF6903 demonstration board (receiver)
- User's manual

Software and hardware documentation are downloaded

296-18053-ND MSP-TRF4903-DEMO **$190.89**

MSP430 Ultra-Low Power Microcontrollers

The MSP430 family of ultra-low power 16-bit RISC mixed-signal processors provides the ultimate solution for battery-powered measurement applications. **Features:** • Ultra-low power architecture extends battery life 0.1uA RAM retention, 0.8uA real-time clock mode, 250uA/MIPS active • High-performance analog ideal for precise measurements • Modern 16-bit RISC CPU enables new applications at a fraction of the code size • In-system programmable Flash permits code changes, field upgrades and data logging • 16-Bit MSP430 Architecture, a 16-bit RISC CPU, peripherals and flexible clock system are combined by using a von-Neumann common memory address bus (MAB) and memory data bus (MDB). **Memory Options:** • Flash, ROM, OTP versions (from 1KB to 60KB) • DMA controller **Modern 16-Bit RISC CPU:** • Optimized for C and assembler programming • Up to 8 MIPS of performance available **Operating Temperature:** -40°C ~ 85°C

TMS320C6000™ Family

TMS320C6000™ DSP Platform — Combining high-performance hardware with considerable development resources, TI's C6000™ DSP platform provides cost efficiency and low power dissipation. Raising the bar in performance, the C6000 DSP platform offers the industry's fastest DSPs running at clock speeds up to 720 MHz and scalable to 1 GHz. The platform, which features a wide range of fully code-compatible devices, consists of the TMS320C64x™, TMS320DM64x™ and TMS320C62x™ DSP fixed-point generations as well as the TMS320C67x™ DSP floating-point generation. Optimal for designers working on targeted broadband infrastructure, performance audio and imaging applications.

TMS320C5000™ Family

TMS320C5000™ DSP Platform

The C5000™ DSP platform offers a broad portfolio, including the OMAP5910 processor, which integrates a TMS320C55x™ DSP core with a TI-enhanced ARM® on a single chip. With the industry's most power-efficient performance, peripheral options and small packaging, this platform provides designers a lead in today's portable Internet and wireless communication markets. Optimal for designers of power-sensitive systems, the C5000 DSP platform offers power consumption as low as 0.33 mA/MHz and performance up to 600 MIPS.

OMAP — ARM9 + C55x

OMAP Processors integrating the command and control functionality of ARM, coupled with low-power, real-time signal processing capabilities of a DSP. The OMAP59xx platform is ideal for portable data terminal applications such as portable medical devices (portable defibrillation, home medical test and analysis) asset and inventory management, (parcel tracking and location, stock inventory and replenishment, real-time data capture with analysis and interpretation) and point of sale (sales and membership processing, merchandising and pricing management verification and authentication) It enables embedded developers to program using familiar development environments by supporting leading operating systems such as Microsoft® Windows® CE.NET, Linux®, and TI's DSP/BIOS real-time scalable kernel. This open development environment makes it possible for designers to deliver innovative products to the market faster, utilizing familiar tools, a standard application programming interface (API) and a seamless interface to the DSP through an optimized interprocessor communication mechanism. The built-in interprocessor communication mechanism eliminates the need for developers to program the RISC and DSP independently resulting in reduced programming efforts.

TMS320C2000™ Family

The C2000™ DSP platform offers the most comprehensive line of DSP solutions driving the digital control revolution, the C2000 DSP platform provides the industry's highest performing and most code-efficient DSPs. With a unique combination of on-chip peripherals such as Flash memory, ultrafast A/D converters as well as robust CAN modules, the C2000 DSP platform sets the standard for performance and peripheral integration.

TMS470 Family

The TMS470 is derived from the 32-bit ARM7TDMI® core. This industry standard architecture includes two instruction sets a 32-bit instructions for fast execution and 16-bit instructions for high code density. It allows unlimited switching between instruction sets and also provides run time decompression. Typical applications include industrial systems, medical instrumentation, consumer electronics, data processing and many other general purpose embedded applications.

NEW! Dolphin Low Power Evaluation Kit

Dolphin is a Frequency Hopping Spread Spectrum (FHSS) Wireless UART chipset for the 902-928MHz US ISM Band. With this hardware the user is able to demonstrate, test and evaluate two way point-to-point communication. **Kit Contents:** • Two Low Power daughter cards • Two Interface cards • Two RS-232 Serial Cables to connect to a computer • Graphical evaluation software • All applicable literature and data sheets. To demonstrate the broadcast capability of the Dolphin chipset, an additional adder kit (DOLPHIN-LP-ADDER) is available.

Description	Digi-Key Part No.	Price Each 1	25	100	T.I. Part No.
Evaluation Kit for Low Power Dolphin Chipset	296-20846-ND	511.19	477.11	443.03	DOLPHIN-LP-EVM
Low Power Adder Kit for Low or High Power Dolphin EVM	296-20845-ND	254.96	237.96	220.97	DOLPHIN-LP-ADDER

DSP Starter Kits

A wide variety of DSP boards and development kits are available from TI and TI's third party network. Products include development boards, evaluation modules, hardware/software bundles and DSP Starter Kits (DSKs) designed to accelerate the application design process from concept through production. DSP Starter Kits are bundled with a DSK-version of TI's Code Composer Studio Development Tools. These provide an excellent platform to evaluate TI DSP and development tools, quickly develop prototypes, demos and proof-of-concept applications at a very affordable getting started price. **Kit Contents:** • Development Board • Parallel PC Cable • US Power Supply • CD-ROM containing documentation and DSK version of Code Composer Studio (TMDSEZD2407: EzDSP version of Code Composer Studio)

eXpressDSP™ Code Composer Studio™

CCStudio's comprehensive, integrated development environment brings complete build and debug tooling, world-class compilers and industry unique analysis and visualization capabilities via JTAG Real-Time Data Exchange (RTDX) to quickly find and fix problems. The real-time foundation provided by TI's DSP/BIOS™ kernel, RTDX™ and TI's simulation capabilities, offers key features such as real-time analysis and advanced data and system visualization, which results in the highest level of host/target integration in the DSP industry. In addition, CCStudio is engineered around an open plug-in architecture that enables developers to integrate additional third-party plug-in tools to customize their development environment for specific project requirements.

Includes: • C/C++ compiler, assembler and linker (code generation tools) with C++, UML, MATLAB and VAB support in compiler **CCStudio Key Features:** • Integrated development environment with tightly integrated editor, debugger, visual project management system, profiler and Probe Points™ • Advanced watch windows, local and global variable windows and profiler capabilities • Update Advisor - live update capability for the latest tools, drivers and software releases • Real-Time Data Exchange (RTDX) between host and target • Real-time analysis and data visualization tools • File I/O Probe Points and graphical algorithm scope probes • Interactive profiling and advanced graphical signal analysis • GEL function support for automation activities such as regression testing • Automated testing and customization via scripting • Multi-processor debugging

Minimum System Requirements: • 233MHz or higher Pentium compatible CPU • 600MB of free hard disk space • 64MB of RAM • SVGA (800 x 600) display • Internet Explorer (4.0 or later) or Netscape Navigator (4.7 or later) • Local CD-ROM drive

Supported Operating Systems for Code Composer Studio: • Microsoft Windows 98 (SP1 and SE) • Microsoft Windows NT (SP6) • Microsoft Windows 2000 (SP1 and SP2) • Microsoft Windows XP

5-6K Interface Evaluation Module

The interface board consists of two signal conditioning sites, two serial EVM sites and a parallel EVM site. Three position screw terminals J1 and J2 and two position screw terminals J6, J8, J9 and J11 provides access to a common power bus routed to all sites. The 5-6K Interface board is intended to provide Data Converter customers with the greatest amount of flexibility for the evaluation of Data Acquisition Products from Texas Instruments. It maintains a compatible interface with the TMS320 Series (DSP).

Features: • Provides all necessary voltages for device under test • Bit clock for codecs • Flexible interface to popular TI DSP's • General codec requirements are addressed

Digi-Key Part No.	Price Each	Texas Instruments Part No.
296-18350-ND	62.78	5-6KINTERFACE

DAP Signal Conditioning Boards

The DAPSigCndBrdBPEVM can be used with Data Acquisition Products (DAPs), 5-6K Interface and C2000 Interface boards. This signal conditioning board, provides up to eight single ended or four differential conditioning channels for use with a wide selection of data converter evaluation boards. The DAPSigCndBrdBPEVM board has four dual supply OPA2132 operational amplifiers that operate at +/- 15 volts. This is a circuit board that gives the designer the ability to condition the input/output signal going to and from ADCs or DACs, through the use of bi-polar (OPA2132UA) amplifiers in the conditioning circuits.

Digi-Key Part No.	Price Each	Texas Instruments Part No.

8032 Microcontroller Core Flash Programmable System Devices

RoHS Compliant Parts Available
(parts other than indicated may be available as RoHS compliant)

uPSD is a family of 8-bit microcontrollers built on an 8032 microcontroller core. uPSD features a flexible memory structure, programmable logic, and rich peripheral set that includes devices with USB and JTAG debug/emulation. These along with analog and supervisor functions, makes uPSD an ideal solution for a wide variety of embedded control applications.

Low Cost Field Programmable Microcontroller Peripherals

RoHS Compliant Parts Available

The low cost PSD3XX family integrates high-performance and user-configurable blocks of EPROM, programmable logic and optional SRAM into one part. The PSD3XX products also provide a powerful microcontroller interface that eliminates the need for external "glue logic". The part's integration, small form factor, low power consumption and ease of use make it ideal for interfacing to virtually any microcontroller.
Major functional blocks of the PSD3XX: • Two programmable logic arrays • 256Kb to 1Mb of EPROM • Optional 16Kb SRAM • Input latches • Programmable I/O ports • Page logic • Programmable security

The ZPSD3XX has improved technology that helps reduce current consumption using the Turbo bit. Excellent if you require a 5V version of the PSD3XX that uses less power.

Speed: -70 = 70ns, -90 = 90ns

DK3300-ELCD Development Kit

The DK3300-ELCD board is a demo board for the uPSD3300 family which is a series of 8051 class microcontrollers (MCUs) that contain a new fast Turbo 8032 core with a large Dual Bank Flash memory, a large SRAM, many peripherals, programmable logic and a JTAG Debug/In System Programming (ISP) port.

The DK3300-ELCD contains all the items needed to explore the Turbo uPSD3300 MCU. Included in the kit are demonstration application examples along with an evaluation copy of the tools needed to develop and compile code for the uPSD3300. The kit also contains the adapters necessary for programming the Flash inside the uPSD and for accessing the built-in JTAG debug port.

497-3750-ND.. **$278.60**

DK3400 Development Kit

To enhance the feature set of uPSD Turbo Family, the USB Microcontroller Development Kit DK3400 has been released from STMicroelectronics. The kit is a demo board for the uPSD3400 family which is a series of 8051 class microcontrollers (MCUs) that contain a fast Turbo Plus 8032 core with 16-bit code fetch path, full-speed USB port, a large Dual Bank Flash memory, a large SRAM, many peripherals, programmable logic and a JTAG Debug/In System Programming (ISP) port.

The DK3400 kit consists of an ED3K4 module and DK3400 motherboard as well as all the items needed to explore the uPSD3400 MCU. There are also demonstration application examples along with an evaluation copy of the tools needed to develop and compile code for the uPSD3400.

497-5218-ND.. **$362.60**

DK900 Development Kit

Kit Includes:

• DK900 Evaluation Board with an 8051 MCU • FlashLINK JTAG In-System Programmer (ISP) • Detailed DK900 Manual for the 8051 MCU • Flash PSD sample in PLCC52 • UART and JTAG cables • 110V power supply

Download Software:

• PSDsoft Express • PSDload (version 1.10) - A Windows serial communications program (download self extracting archive load.exe) • DK900 8051 Demo contains demos for 8051 and 8051XA implementations • PSDstep - Serial communications protocol manual (MS Word doc format) • PSDloadman - Serial communications reference document (MS Word doc format)

497-2380-ND.. **$102.96**

DK3200 Development Kit

Features:

• Flexing and Debugging • Keil ISD51 background debugger runs on UART • Easily connect In-Circuit Emulator with no adapter needed • Connect HP logic analyzer cables directly to expansion connectors Reliable 0.15µm NOR Flash Technology

497-2379-ND.. **$156.00**

Microcontrollers

For the mass market ST offers several families of microcontrollers, e.g. the ST62, the ST7 and the ST9 ranges, with the result that there is a ST microcontroller to suit every kind of application, from those where minimum cost is the primary requirement to those that need powerful real-time performance and high-level language support. The recently introduced ST FIVE family integrates all the benefits of microcontrollers, together with a dedicated architecture, the "Decision Processor", oriented to high-level algorithms and a visual programming approach. ST also offers the innovative Programmable System Memory (FlashPSD, DSM) products, which combine memory functions such as Flash, EEPROM and SRAM with programmable logic on a single chip. Designed to interface with all standard microcontrollers to provide a complete system implementation, Programmable System Memories can be quickly and easily programmed without special manufacturing equipment, even in the field.

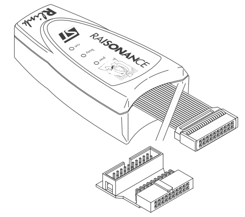
ST7 Programmers and Evaluation Boards

STX-RLINK Programmer



The RLink is Raisonance's versatile, low-cost, in-circuit debugger/programmer for ST7, uPSD, and STR7 microcontrollers. It connects to application or evaluation boards for programming and debugging via a JTAG standard connection for ARM core-based and uPSD microcontrollers, or via STMicroelectronic's In-Circuit Communication (ICC) connection for ST7 microcontrollers.

The RLink can be driven by Raisonance's RIDE integrated development environment for in-circuit debugging and programming of applications for ST7 and uPSD, and in-circuit programming of STR7 microcontroller applications. In combination with Raisonance's free RFlasher programming software, RLink can be used as a very-low cost, dedicated in-circuit programmer for ST7 and STR7.

ST7 application developers can also drive RLink using the STVD7 (version 3.3 or later) integrated development environment for in-circuit debugging/programming and STVP7 (version 2.0 or later) for in-circuit programing. Both are available for free download in the ST7 Toolset.

Note: RLinks included with REva starter kits for STR7 (ST part number: STRxxx-SK/RAIS) and Professional Kits for STR7 (Raisonance part number: RKITPSTRxxx) provide debugging of STR7 devices.

497-5046-ND..........**$82.25**

ST7 Programmers

The ST7 EPB series of programming boards is able to program all ST7 microcontrollers with OTP, EPROM, EEPROM or FLASH memories, regardless of the socket type. Certain programming boards also support In-Situ Programming (ISP) or In-Circuit Programming (ICP). These boards are driven by ST programming software: ST7 Visual Programmer (STVP7), which includes all useful functions such as Verify, Blank Check, Read Master and others.

FEATURES:

• ISP/ICP Programming • Handled Formats: Intel HEX • Host Interface: Parallel Port (LPT) • Power Supply: Delivered inside the package • User Manual **Software:** • STVP7 (Free, available on ST CD-ROM and web site)

Devices Supported*	Digi-Key Part No.	Price Each	STMicroelectronics Part No.
ST7262x	497-2901-ND	1036.00	ST7MDTU2-EPB/US
ST7263B	497-2902-ND	896.00	ST7MDTU3-EPB/US

*Socket: All packages except TQFP64 10*10

ST7 Evaluation Boards

ST7FOPTIONS-EVAL: The Safe ST7 Evaluation Board is intended for starting with the ST72F264 microcontroller and evaluating the features of the ST7 Flash family. The ST72F264 sample installed on-board is programmed with an example software application.
FEATURES: Evaluate ST72F264: • Integrated Low Voltage Detector/Auxiliary Voltage Detector (LVD/AVD) • Safe backup clock (CSS: Clock Nested Interrupts) **Develop your own application using:** • I/O port connectors • Wire-wrap area • LEDs, 7-segment displays, buzzer • EEPROMs (SPI, I²C) • Trimmers and buttons for reset and interrupts **Standalone Board:** • A 9V battery is provided • Input connector for external power
Devices Supported: ST72F26x

Contents: • Safe ST7 Evaluation Board • 9V Battery • One ST72F264 MCU programmed with the example software application code • CD-ROMs • User Manual • Selection Guide • Documentation
ST7MDTULS-EVAL: FEATURES: • Low-speed USB Evaluation Board • Can be used to develop USB Class applications: In-Application Programming (IAP) hardware support Device Firmware Upgrade (DFU) and Human Interface Device (HID) application demonstrator (LEDs, buttons, trimmer) • ST72F61/62/63B MCU Family support • Wrapping area • Windows 98 applet, as well as USB firmware libraries for running the peripheral device
Devices Supported: ST72611, ST7262, ST263B
Contents: • Two ST7 Low-speed USB microcontroller devices: ST72F62 in SDIP42 package and ST72F63B in SDIP32 package • One USB evaluation board • CD-ROMs
ST7MDT20-EVY/US and ST7MDT20-EVC/US: These boards have been designed to help people begin working with ST7 devices or perform some tests and peripheral evaluation (SPI, I²C, ADC...). They can be used with a device, the emulator or development kit.
FEATURES: • LEDs • Trimmer • ISP connector for Flash devices programming • Reset button • External Interrupt Management • Buzzer • SPI, I²C, EEPROM • CAN communication
Devices Supported: ST72124, ST72311, ST72311Rx, ST72314, ST72321, ST72324, ST72331, ST72334, ST7251x, ST72521 in QFP64
Contents: • MDT20 board • Power Supply • ISP/ICP Connector for Flash devices programming • Exercise manual (with detailed description of the board)

ST7 Emulators

STMicroelectronics continuously invests in efforts to offer a high-end emulator to support ST7 microcontrollers. The ST7-EMU3 series of emulators is the third generation of high-end emulators for ST7. EMU3 series emulators are designed to speed up the development of complex software applications for ST7 microcontrollers by providing a complete range of advanced emulator debugging features, as well as In-Circuit Debugging (ICD) and In-Circuit Programming (ICP) capability.

Features:

- A common hardware development system mainframe supports the entire ST7 family of microcontrollers.
- 64Kbytes of user modifiable and configurable emulation RAM, allows memory mapping of all ST7 family devices as well as modeling hypothetical memory configurations.
- Logic analyzer events may trigger a breakpoint or simply define data capture parameters, in accordance to user preferences.
- Simple connection of the emulator system to the host PC via RS-232 serial channel or parallel port.
- Log files allow storage and subsequent re-display of any display screen for subsequent analysis.
- Real-time source level emulation allows viewing and breakpoint setting on high level source code rather than on disassembled target code for optimum user friendliness.
- Unlimited breakpoints may be set for any op-code fetch or any address access, and conditions may be defined for the generation of 2 external synchronization signals
- 1K by 32-bit wide trace memory for logic analyzer allows complex and sequential events to be defined on any combination of address and data, as well as 3 internal and 5 external logic signals
- Emulation system may be driven by a Windows-based GNU debugger software or DOS software running on host PC, allowing full control and monitoring of hardware resources.
- Multiple windows allow concurrent real-time display of source code, microcontroller resources, internal registers, trace data, etc.
- Command files can be used to execute a set of debugger commands in batch mode.
- Editable configuration files ensure tailoring of working environment to user preferences.

ST7 Development Kits

The ST7-DVP3 consists of two boards. The main emulation board (MEB) is identical for every ST7-DVP3 development kit and the target evaluation board (TEB) is specific to one, or a family of ST7MCUs. Therefore, what makes each ST7-DVP3 development kit distinct (and defines its emulation capabilities) is the type of TEB it contains. The ST7MDT20-DVP2 TEB is capable of emulating all of the microcontrollers listed in the supported devices, however, to perform in-situ emulation (where the development kit is connected to your application board as if it were the actual microcontroller), you need to have the appropriate connectors.

32-Bit ARM Microcontrollers and Tools

RoHS Compliant Parts Available
(parts other than indicated may be available
as RoHS compliant)

The STR7 is a range of innovative 32 bit microcontrollers built on the industry standard ARM7 RISC core. The STR7 devices include high quality embedded Flash and feature powerful peripheral functions including USB and CAN. They are ideal for embedded applications requiring a compact yet powerful MCU and a versatile scalable solution. STR7 are used in various applications like user interfaces, factory automation systems, point of sale, appliances and many others. Built on the leading ARM™ architecture, STR7 allows fast response to emerging requirements, enabling the rapid implementation of changes at low cost. The flexibility of the family, with its rich options for Flash, RAM, the largest peripherals set and its versatile package options helps you reuse it for a whole range of products, optimizing your developments. It helps you build cost effective and powerful solutions that bring innovation in your market. ARM core with embedded Flash and RAM.

The STR71xF series is a family of ARM powered 16/32-bit Microcontrollers with embedded Flash and RAM. It contains the high performance ARM7TDMI CPU with an extensive range of peripheral functions and enhanced I/O capabilities. All devices have on-chip high speed single voltage FLASH memory and high speed RAM. The STR71xF family has an embedded ARM core and is therefore compatible with all ARM tools and software. For more information on the ARM Realview Developer Kit for ST and third party development tools, please refer to the www.st.com/mcu

STR730F Flash microcontrollers from STMicroelectronics combine the industry standard ARM7TDMI® RISC microprocessor with embedded Flash and powerful peripheral functions, including up to 20 timers, 4xUARTs and 3xCANs. They are ideal for embedded applications requiring a compact yet powerful MCU, as well as versatile, scalable solutions such as user interfaces, factory automation systems and appliances. Additionally, the STR730F family features a single 5V power supply particularly suited to industrial applications. **Features:** • High-performance industry standard core ARM7TDMI RISC 32-bit CPU • Extensive software and tools including the complete STR7 library supporting all standard peripherals and the CAN • Largest choice of peripherals and interfaces including 4xUARTs, up to 20 timers and up to 3xCANs • Flexible power and clock management, five low-power modes, low-power voltage regulator, dual APB buses architecture, multiple clock sources • Single 5V power supply • High-quality embedded Flash (data retention 20 years at 85°C) • 16 x channels DMA • Rich package options including the tiny proven 10x10 LFBGA144 • Temperature range: -40°C ~ 85°C and -40°C ~ 105°C **Benefits:** • Future-proof microcontrollers that easily adapt to customer requirements • Dramatically reduces development time and increases ease-of-use • Reduces system cost with all peripherals in one chip • Gives you full control over your power consumption and performance/power trade-offs • Native supply of industrial applications. No 3.3V conversion needed • Suitable for long-life equipment • Lower CPU load, optimized access to memory • Optimizes your developments: the same device in different options will fit all your product range • Increase domain of validity for the application to +105°C

STMicroelectronics brings the power of an ARM9E™ processor core to the world of general purpose Flash microcontrollers, opening endless opportunities to embedded system designers by making networking and other demanding applications easy and affordable.

The STR910F family of MCUs delivers up to 96 MIPS peak performance while executing code directly from its Flash memory, executes single-cycle DSP instructions within its ARM966E-S® core, and includes Ethernet, USB, and CAN interfaces. These features, combined with Flash memory sizes reaching 544Kbytes and a vast 96Kbytes SRAM, make the STR910F an ideal single-chip solution to transform embedded control applications into low cost nodes on a local network, or on the internet.

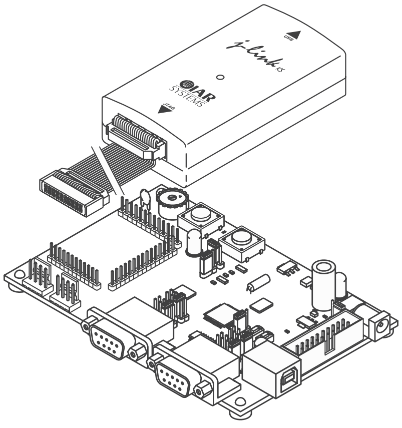
STR7 KickStart Kits from IAR



IAR KickStart Kits™ are cost effective and complete evaluation and development systems in a single package that are designed to help you to a flying start with all the necessary hardware and software you need to design, implement and test your application.

Kit Includes:

- STR7 Development Board
- J-Link-KS — IAR Systems' USB-to-JTAG Debugger
- CD containing Embedded Workbench® for ARM — IAR's easy-to-use, powerful integrated development environment that seamlessly integrates a complete range software tools in a comprehensive toolkit, recognized for its efficient code generation and unique debugging properties. It includes the 32KB KickStart version of the C/C++ compiler, built in Flash loader and many useful sample projects covering the full range of STR7 peripherals

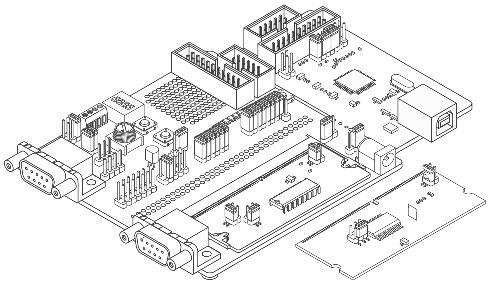
497-5047-ND	**$418.25**
497-4886-ND	**$418.60**

STR7 REva Starter Kits from Raisonance



The REva starter kits from Raisonance are cost effective and complete solutions for evaluating and starting application development with ST microcontrollers.

Kit Package Includes:
• REva Mother Board: Universal evaluation board designed to easily and quickly evaluate a range of ST microcontrollers. The mother board provides a host of evaluation features including LEDs, push buttons, switches, temperature sensor, potentiometer and interfaces for I^{2}C, SPI and UART. • REva Daughter Boards: Dedicated boards that contain all the specific components for a given microcontroller, including the MCU itself, a clock selector and other device dependant features. • RLink: In-circuit debugger/programmer, featuring USB host interface. The RLink is attached to the REva mother board so that no additional connection cables are required for in-circuit programming and debugging with the REva. In addition, the user can power the MCU, REva evaluation board and the RLink all from the USB connection. • Raisonance's RIDE: The full-featured Integrated Development Environment, which provides seamless integration of C and Assembler tools and a full-featured debug interface.

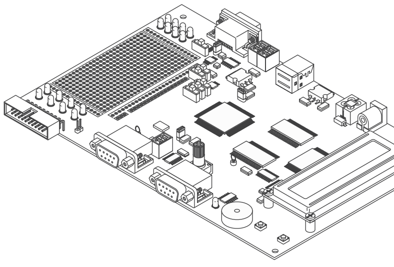
497-5049-ND	**$208.25**
497-4889-ND	**$278.60**

STR71x Evaluation Board

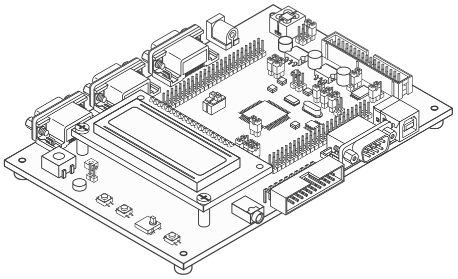


The STR710-EVAL board is a complete development platform for the STR71x series. The STR710-EVAL board is a cost effective, flexible and open design to demonstrate the capability of the STR71x series of flash microcontrollers and to enable rapid evaluation of the STR71x devices and available peripherals. It includes the high performance STR710FZ2T6 ARM7TDMITM device that boasts 2Mbits embedded flash with "best-in-class" random access time, 64KB on-chip high speed SRAM as well as up to 10 serial communication interfaces, including USB and CAN.

The STR710-EVAL board includes SRAM and flash memory on the EMI to enable full freedom in development of large programs before custom hardware is designed. It integrates a 2x16 LCD, LED's, UART, CAN, USB interfaces, piezo buzzer and test buttons to create a versatile stand alone test platform. A wide choice of development tool support is readily available, including tools from: STMicroelectronics and 3rd parties.

497-4516-ND	**$420.00**

NEW! STR750 Evaluation Board



The STR750 Evaluation Board (STR750-EVAL) is a complete, development platform for STMicroelectronic's ARM® core-based STR75xF microcontrollers. Based on a cost effective, flexible and open design, it allows easy demonstration of STR75xF capabilities and enables rapid evaluation of the microcontroller's peripheral and other features.

It includes the high performance STR750F microcontroller, which is based on the ARM7TDMI-S core and includes USB 2.0 compliant port with full speed data transmission, CAN 2.0A/B compliant interface, 3 UART channels, internal Flash and internal SRAM memory.

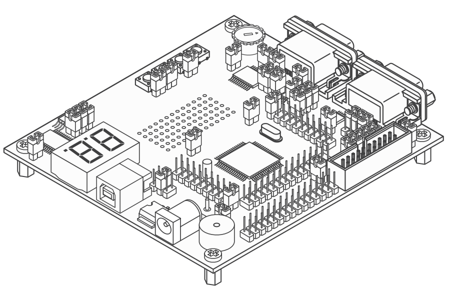
The STR750-EVAL features a complete range of connectors and hardware features for developing applications based on STR75xF peripherals including motor control, USB and RS232 connectors, microphone, speaker, joystick and LCD display.

The STR750-EVAL uses a JTAG standard interface to connect to your host PC via any of a range of in-circuit emulators (ICE) for ARM core-based microcontrollers.

Features: • Three 5V power supply options: Power jack, USB connection or daughter board • RTC • Audio play and record • 3 RS232 connectors, one with hardware flow control • USB 2.0 compliant with full speed (12Mb/s) data transmission • CAN 2.0A/B connection • Inductor Motor Control connector with 6 PWM output and Emergency Stop • Debug and programming support via 20-pin JTAG connector • Dot-matrix LCD module • Joystick with 4-direction control and selector • Extension connectors for daughter board or wrapping board

497-5748-ND	**$334.60**

NEW! Hitex Starter Kit for STR7



The Hitex Starter Kits for ST ARM® are complete, full-featured solutions for starting application development and evaluating the features of STMicroelectronic's ARM core-based microcontrollers. They come with all the hardware and software developers need to start developing applications for STR7 and STR9 devices, including full-featured evaluation board, target microcontroller, Tantino JTAG interface and the HiTOP5 Integrated Development Environment with GNU C/C++ toolset.

Starter kit architecture:

Tantino: In-circuit debugging and programming tool for ARM7TDMI™ and ARM966E™ core-based microcontrollers features USB host interface and industry standard JTAG application board interface.

Hitex Evaluation Board: Full-featured evaluation board with target microcontroller is designed for quick and easy evaluation of a complete range of microcontroller features such as Ethernet, USB, CAN, UART, I^{2}C and SPI as well as the ADC peripheral. Power supply is included.

HiTOP5 Software: Hitex's integrated development environment that drives the hardware and offers a full range of project management, source code editing and debugging features from an intuitive graphical interface. Includes the GNU C/C++ toolset for compiling application source files. The starter kit comes with 16K code-size limited version of the HiTOP5 IDE. HiTOP5 also supports the Tanto in-circuit debugging tool and Tanto Port Trace for STR9 microcontrollers with Embedded Trace Macrocell

Starter Kit Key Features:

Tantino: • USB interface to host PC • JTAG standard interface • Supports ARM7TDMI™ and ARM966E™ core-based microcontrollers

HiTOP5: • GNU C/C++ Toolset • HiSIM instruction simulator for ARM® • Projected management • Integrated editor • High-level language debugging • Trace support • Drives both Tantino and Tanto JTAG interfaces

497-5751-ND	**$211.47**

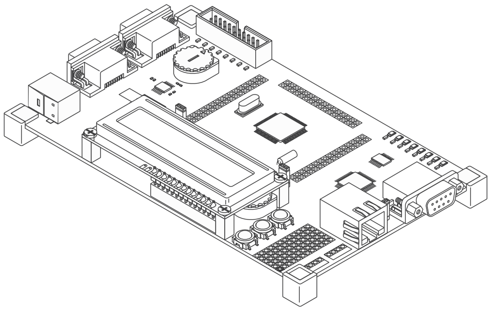
Keil Starter Kit for STR7 and STR91xF



The Keil starter kits are complete solutions for starting application development and evaluating STMicroelectronic's families of ARM® core-based microcontrollers.
They come with all the hardware and software you need to start developing applications for the STR7 ARM7TDMI™ and STR9 ARM966E™ core-based microcontrollers. The kits come complete with evaluation board and target microcontroller, the ULink™ USB-to-JTAG in-circuit debugger/programmer Keli's uVision3 integrated development environment for ARM and the 16KB code-size limited version of the ARM RealView Compilation Tools.

Starter Kit Architecture

ULink: USB-to-JTAG in-circuit debugger/programmer integrates fully with uVision3, allowing users to download the application to the target and debug it while it runs on the ST ARM core-based microcontroller on the evaluation board.

Evaluation Board: An application board that provides a full range of features (I/Os, ADC, UART, SPI, USB...etc.) to help users evaluate and start developing applications for the included microcontroller.

Keil Development Software: A suite of software tools for developing and debugging applications for STR7 and STR9 including: • uVision3 integrated development environment integrating the ARM RealView Compilation Tools and Keil's debugging software so that users can quickly and easily develop and debug their applications while they run on a target microcontroller. • ARM RealView Compilation Tools (RVCT) 16K code-size limited version of the optimizing C/C++ compiler for ARM core-based microcontrollers.

Starter Kit Key Features

ULink: • USB interface to the host PC • 20-pin JTAG application interface • Supports ARM7TDMI and ARM966E core-based microcontrollers.

497-5753-ND	***NEW!*** (STR750-SK/KEIL)	**$211.47**

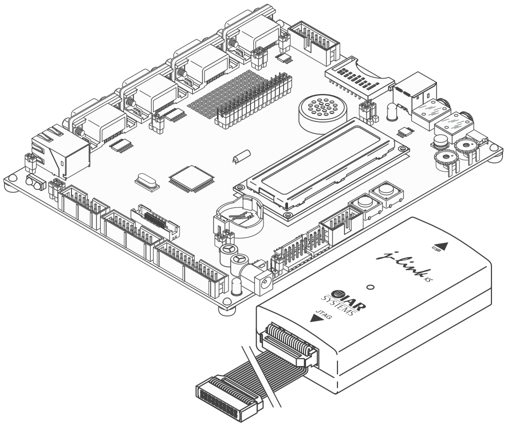
KickStart Starter Kit for STR7 and STR9



The KickStart Kits™ (STR711-SK/IAR, STR712-SK/IAR, STR730-SK/IAR, STR731-SK/IAR and STR91x-SK/IAR) are IAR's complete, cost-effective solutions for starting application development and evaluating STMicroelectronic's ARM® core-based microcontrollers.
They come with all the hardware and software you need to start developing applications for a full range of STMicroelectronic's ARM7TDMI™ and ARM966E™ core-based microcontrollers. The kits include the KickStart Development Board with target microcontroller, the IAR JLink USB-to-JTAG debugger and IAR Embedded Workbench® for ARM (EWARM) integrated development environment with the 32KB KickStart version of the C/C++ compiler, built in Flash loader and sample projects for all device peripherals.

Starter Kit Architecture

JLink: USB-to-JTAG in-circuit debugger/programmer integrates fully with EWARM, allowing you to download the application to your target and debug it while it runs on your ST ARM core-based microcontroller.

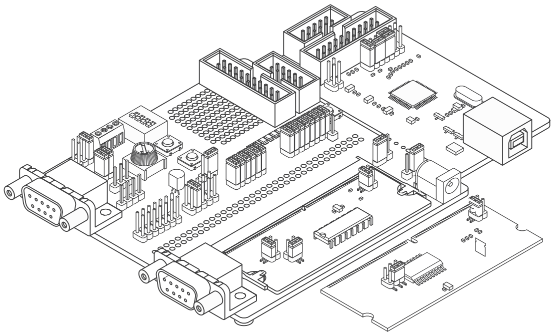
KickStart Development Board: Evaluation board that provides a full range of features (I/Os, ADC, UART, SPI, I^{2}C, USB...etc.) to help you evaluate and start developing applications for the included microcontroller. The board is powered from the JLink's USB connection with the host PC.

IAR Development Software: A suite of software tools for all phases of application development that includes: • IAR Embedded Workbench for ARM integrated development environment with the KickStart 32KB C/C++ compiler to build the application and the C-SPY™ debugger for debugging the application while it runs on your micrcontroller • VisualSTATE® 20-state version of IAR's graphical design environment with C/C++ code generator for developing application code based on machine states.

Starter Kit Key Features: JLink: • Supplies power from USB connection via pin 19 of the JTAG connector (no additional power supply required). • Download speed up to 50KB/sec • Maximum JTAG speed 8MHz • Auto speed recognition • 20-pin standard JTAG connector • USB and 20-pin flat cable included • Level shifter for 3.3V to 5V conversion (STR73X-SK/IAR, STR91X-SK/IAR • Supported platforms: Microsoft® Windows® 2000 and XP

497-5752-ND	***NEW!*** (STR750-SK/IAR)	**$317.87**
497-5065-ND	(STR91X-SK/IAR)	**$299.00**

REva Starter Kit for STR7 and STR9



The REva Starter Kits (STR71X-SK/RAIS, STR730-SK/RAIS, STR91X-SK/RAI) are Raisonance's complete, low-cost solutions for starting application development and evaluating the features of STMicroelectronic's ARM7TDMI™ and ARM966E™ core-based microcontrollers.

Kits come with all the hardware and software developers need to start developing applications for STR7 and STR9 devices, including the REva evaluation board, microcontroller(s), embedded RLink JTAG in-circuit debugger/programmer and Raisonance Integrated Development Environment (RIDE).

Starter Kit Architecture

Embedded RLink: In-circuit debugging and programming tool with JTAG application board interface and USB connection to the host PC.

REva Motherboard: Universal evaluation board designed for quick and easy evaluation of a complete range of device features. It is powered from the RLink's USB connection to the host PC.

REva Daughter Boards: Interchangeable boards featuring different target microcontrollers, make it easy to evaluate and develop applications for a complete range of MCUs from a single evaluation platform.

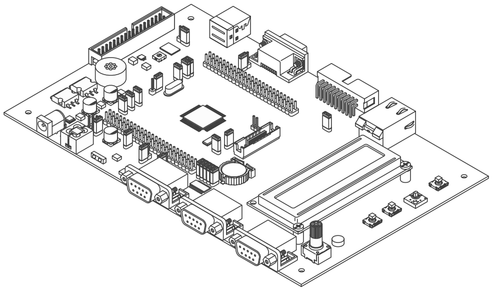
RIDE Software: Raisonance's integrated development environment drive the hardware and offers seamless control of all software development tools (compiler, assembler, linker, debugger, etc.) from an intuitive graphical interface. Fully integrates control of the GNU C/C++ tools. The starter kit comes with the 16K code size limited version of RIDE.

REva Starter Kits: Based on the same mother/daughter board design, with embedded RLink, and driven by RIDE are available for the ST7 and uPSD 8-bit microcontroller families.

Starter Kit Key Features: Embedded RLink: • USB interface to host PC • Industry standard JTAG application interface **REva Motherboard**: • One standard SO-DIMM connector to plug in daughter boards • Digital and analog I/O evaluation features, including on-board LEDs, buttons, switches, external analog connector, temperature sensor and potentiometer • I^{2}C EEPROM and bus • RS232 driver and 2 DB9 connectors • Prototyping area • VDD settings for 1.8V, 3.3V and 5V • USB powered, no external power required

497-5754-ND	***NEW!*** (STR750-SK/RAIS)	**$211.47**
497-5064-ND	(STR91X-SK/RAI)	**$199.00**

STR910 Family Evaluation Board



The STR910 evaluation board (STR910-EVAL) is a complete development platform for the STMicroelectronic's ARM® core-based STR91xF. Based on the ARM966E-S® core.

The STR91xF includes Pre-Fetch Queue and Branch cache, full speed USB 2.0 compatible port, Ethernet 100/10 interface, embedded MAC, CAN2.0B compliant interface, a large Dual Bank Flash memory, a large SRAM and many peripherals.
It includes a STR910F microcontroller, pre-loaded demonstration software and a full range of hardware features to help you evaluate device peripherals (Motor control, IrDA, USB, Ethernet, CAN,...etc.) and develop your own applications. Extension headers make it possible to easily connect a daughter board or wrapping board for your specific application.

Features:

• Three 5V power supply options: Jack, USB connection or a Daughter board • RTC with tamper detection • Audio play and record • 3 RS232 connectors with support of full modem control on one connector • Infrared Data Access (IrDA) • USB 2.0 compliant with full-speed (12Mb/s) data transmission • CAN 2.0B connection • Inductor Motor Control connector with 6 PWM output, emergency stop and Tachometer input • IEEE-802.3-2002 compliant Ethernet connection • Debug support via 20-pin JTAG connector • 38-pin ETM connector for optional trace module • Dot-matrix LCD module • Joystick with 4-direction control and selector • Extension connectors for daughter board or wrapping board

497-5067-ND	**$289.90**

MEMS Accelerometers

ST offers a portfolio of MEMS-based sensors able to sense acceleration in two or three axis. The mechanical part of linear accelerometer sensor is based on a silicon inter-digitated structure done by fixed and movable fingers. To sense the acceleration in each axis, these structures are packaged in orthogonally groups and the acceleration in each direction is sensed by measuring the change of capacitance between fixed and movable elements correlated to that axis. The changing of capacitance per axis is than translated into an analog or digital output signal in the interface chip. The whole process of design and production of sensors is managed by STMicroelectronics. This guarantees to the customer high volume production, long term security, high precision and reliability since all the devices are tested by Standards and Proprietary Test Systems.

Output	Axis	Acceleration Range	Package	Calibration	Digi-Key Part No.	Price Each			STMicroelectronics Part No.
						1	10	100	
Analog	2	±2g	8-LGA	@3.3V	497-4915-ND	9.20	8.40	6.64	LIS2L02AL
Analog	2	±2/±6g	8-LGA	@3.3V	497-4916-ND	10.12	9.24	7.31	LIS2L06AL
Analog	3	±2g	8-LGA	@3.3V	497-4917-ND	11.90	11.01	8.33	LIS3L02AL
Analog	3	±2/±6g	8-LGA	@3.3V	497-4918-ND	13.20	12.21	9.24	LIS3L06AL

EK3LV02DQ Evaluation Board

The EK3LV02DQ will help you in evaluating the LIS3LV02DQ 3-axis, ±2g/±6g Digital Output Low Voltage Linear Accelerometer MEMS accelerometers. The kit implements a typical application which enables the user to acquire the acceleration data sensed by the LIS3LV02DQ product. In detail, the signal measured by the sensor are read by the microcontroller of the ST7 family mounted on the board and they are sent to a PC for further processing via USB link.

497-4923-ND.. **$91.00**

EK3L02AQ Evaluation Board

Helps you in evaluating the LIS3L02AQ MEMS accelerometers in QFN package with the analog output. It implements a typical application composed by the accelerometer and the rail to rail precision buffer TS924. The supply voltage is generated through a LE00AB/C voltage regulator, it manages the correct power supply allowed by the LIS3L02AQ product.
All parts on board of the EK3L02AQ evaluation kit are STMicroelectronics components.
497-3588-ND.. **$52.00**

EK3L02AS4 Evaluation Board

Helps you in evaluating the LIS3L02AS4 MEMS accelerometers in SO24 package with the analog output. It implements a typical application composed by the accelerometer and the rail to rail precision buffer TS924. The supply voltage is generated through a LE00AB/C voltage regulator, it manages the correct power supply allowed by the LIS3L02AS4 product.
All parts on board of the EK3L02AS4 evaluation kit are STMicroelectronics components.

497-3589-ND.. **$52.00**

inDART Series and Starter Kits

inDART SERIES: They are a powerful entry-level tool for Freescale Semiconductor, Inc. (Formerly Motorola SPS) MCU-based systems. InDART takes advantage of Metroworks CodeWarrior Integrated Development environment and the ISP (In-System Programming) feature to program the flash memory of the Freescale family of MCU's. InDART provides you with everything you need to download (program), in-circuit emulate and debug end-user code. Full speed program execution allows you to perform hardware and software testing in real-time.

Features: • Low cost and easy to use kits • ISP/ICP programming • USB interface • In-circuit debugging

Kit Includes: • inDART board and demo board with prototyping area • USB Cable • Software CodeWarrior CD and Softec System CD • Getting started guide

STARTER KITS: These starter kits are entry-level tools which allow you to get familiar with the different Freescale Semiconductor, Inc. (formerly Motorola SPS) microcontrollers. These kits along with the included CodeWarrior software allow for easy write, compile, download, in-circuit emulation and debug of user code. Includes a prototyping area to develop your own small applications.

Features: • Low cost and easy to use kits • Full-speed program execution for hardware and software testing • In-circuit debug and emulation • Serial interface

Kit Includes: • Evaluation board with prototyping area • Starter guide • Serial cable

APPLICATION KIT: Integrated system designed to provide the user with a complete, embedded Ethernet application.

Features: • MC9S12NE64 microcontroller • 10/100 BaseT • 8Mbit serial FLASH memory • 4Kbit serial EEPROM • BDM connector for in-circuit debugging • RS-232 connector with transceiver • 8 user LEDs • LAN status LEDs • Speaker • Temperature Sensor • 12VDC Motor with MC33887 H-bridge driver • Prototype area

Kit Includes: • Evaluation Board • Ethernet core module • AC Adapter • Ethernet cross cable and a serial cable • "System Software" CD-ROM • CodeWarrior CD-ROM • User's Manual

ST5 and ST7 Development Kits

The easy-to-use inDART series development kits are powerful entry-level tools for ST5 and ST7 based systems. These kits give you the ability to write, compile, download and in-circuit emulate and debug your code. Supports ISP (in-system programming) to program the flash on the target MCU.

Features: • Low cost and easy to use • ISP/ICP programming • USB Interface • In-circuit debug

Kit Includes: • inDART board, Demo board, Starter guide, CodeWarrior, STVD7 (ST Visual Debug) and DataBlaze software

M68HC908 Family — 8-Bit

The MC68HC08 Family is a low cost, high performance, Complex Instruction Set Computer (CISC) with a Von Neumann architecture. **Features:** • Enhanced HC05 Programming Model • Extensive loop control functions • 16 Addressing modes • 16-bit Index Register and Stack Pointer • Memory to memory data transfers • Object-code compatible with Freescale's 68HC05 architecture for easy migration • Designed to allow efficient, compact modular coding in assembly or C with full 16-bit Stack Pointer and stack relative addressing • Efficient instruction set with multiply and divide that is easy to learn and use **Memory:** • In-application, In-circuit Re-Programmable Flash Memory (1.5K to 4K Bytes) • 128 Bytes of random access memory (RAM) **Peripherals:** • Two-Channel, 16-bit Timer with selectable input capture, output compare or pulse width modulation (PWM) • Internal Clock Oscillator reduces board space and system costs by eliminating external components • Flexible I/O allows direct drive of LED and other circuits to eliminate external drivers and help reduce system costs • System Protection features, including Watchdog Timer and On-chip Low Voltage Detect/Reset to help reduce cost and increase reliability **68HC908QT4 Demonstration Board (M68DEMO908QT4)** This demo board enables you to use the included CodeWarrior Development Studio Special Edition to modify demo code or develop new code using ASM or C, then program the Flash, and debug in real time all with no additional hardware.
Features: • Battery-Powered 8-pin QT4 Device • LEDs for user feedback • Potentiometer for A/D Input • Push Buttons for user Input • Access to all I/O for user-provided prototyping • Software demo with application code utilizing the A/D, timers, and I/O

(Continued)

HC908 Family — 8-Bit

Features: • 68HC08 CPU with Flash memory • Fully upward code compatible with the 68HC05 family for easy migration • Fully static design allowing operation down to DC • 16-bit index register • 16-bit stack pointer • 2, 4 or 6 channel 16-bit timers with built in prescalers • COP watchdog protection • Low-power STOP and WAIT modes • Available USB, SPI, SCI and CAN2 • Available A/D converter • 16 addressing modes • LVI (Low Voltage Inhibit) supply voltage monitor • 16/8 divide • 8 x 8 multiply • 68HC908AZ additional feature: MSCAN (Motorola Scalable Controller Area Network) interface conforms to CAN 2.0B

HC912 Family — 16-Bit

The 68HC12 CPU is upwardly compatible with the 68HC11 core and supports all registers, instructions, addressing modes and operating modes of the 68HC11. **Features:** • Fully static design allowing operation down to DC • 16-bit Accumulator • 20-bit ALU • 16-bit Timer with built-in prescaler • BDM (Background Debug Module) for faster debugging and non-intrusive, real time read/write capability to the memory and registers • SAE J1850 BDLC-D (Byte Data Link Control Module) for single wire communication with other BDLC MCUs • COP Watchdog Timer • Low power STOP and WAIT modes • SPI, SCI • High-level language optimization • 32/16 Divide • 16 x 16 Multiply

freescale semiconductor

Introducing MC9S08LC60/36 Freescale's LCD Microcontroller

Driving your display with the speed, low voltage, and C compatibility of S08 architecture

The S08LC microcontroller expands the Freescale 8-bit portfolio by offering an integrated LCD controller with the low power and feature-rich capabilities of the S08 family. It is the first LCD S08 8-bit microcontroller for battery-powered and handheld applications. The S08LC is a flash-based device with enhanced EEPROM emulation, eliminating the need for off-chip EEPROM, saving both board space and cost.

It is specifically crafted to provide high segment count that is easy on the batteries. A larger segment display of up to 160 segments offers total flexibility with a graphical display and sufficient memory to act as application and LCD controller without added cost of a dot matrix or "chip-on-glass," fulfilling the need for a broad spectrum of applications with displays.

Target Applications

- Battery operated hand-held devices
- Thermostat
- Calculators
- Alarms/Clocks
- Small appliances
- Portable health care devices
- Exercise equipment
- Personal diagnostics
- Low-end utility metering
- ZigBee™ nodes with display
- Scrolling text displays

Features

Operating Voltage/ Performance
- 1.8V / 8MHz — 3.6V / 20MHz, -40°C to +85°C

Memory
- 2.5/4K RAM / 36/60K Flash
- Two Flash arrays for enhanced EEPROM emulation

Communications
- SCI, 2xSPI, I2C bus module up to 100kbps

Features/ Benefits
- 40/41 frontplanes, 4/3 backplane LCD driver
- 3V and 5V glass LCD voltages supported
- 8 channel, 12-bit A/D with internal bandgap reference voltage
- Analog comparator
- Two configurable 16-bit TIM modules (4-ch total)
- Real time interrupt for SW time of day

Power Consumption
- <10uA in Stop 3 with LCD & OSC enabled (typical)

Package Options

Part Number	Package	Temp. Range
MC9S08LC36LH	64-pin LQFP	-40°C to 85°C
MC9S08LC36LK	80-pin LQFP	-40°C to 85°C
MC9S08LC60LH	64-pin LQFP	-40°C to 85°C
MC9S08LC60LK	80-pin LQFP	-40°C to 85°C

DEMO9S08LC60

The cost effective DEMO9S08LC60 demonstration kit contains everything a designer needs to develop and evaluate application code. The integrated USB multilink allows a designer to communicate with the board and target device with only a USB cable. Included custom LCD glass demonstrates the capabilities of all LCD segments in "an end-application format".

Development Tools

CWX-HXX-SE – Complimentary

Special Edition: CodeWarrior Development Studio
CodeWarrior Special Edition for HC(S)08/RS08 MCUs. Includes integrated development environment (IDE), linker, debugger, unlimited assembler, Processor Expert™ auto-code generator and full-chip simulation. 16 KB C Compiler included for HC(S)08 MCUs.

M68CYCLONEPROE

The Cyclone Pro provides all the capabilities of the BDM Multilink plus USB/ Ethernet interfaces, the ability to function as a standalone programmer with pushbuttons and LEDs to control operation, and support for all MON08 HC08s and BDM HCS08s and HCS12s.

USBMULTILINKBDME

The USBMULTILINKBDME is a cost effective in-circuit emulator, debugger and programmer for all HCS08 and HCS12 MCUs.

Digi-Key Product Training Module

To learn more about the technical features and benefits of the MC9S08LC60/36, check the web-based product overview at http://dkc1.digikey.com/us/en/PTM/Modules.html

Virtual Lab

Avoid the hassles of shipping, installation and configuration until you have evaluated the solution you really need. Run the available demos, go through tutorials, and try out your own code.

Virtual Labs can be used on demand when available or reserved for use at a specific time. Find quick start guides, development board information, manuals, product information, product summary, schematics tools, demos, tools and software.

For more information, development tools, Virtual Lab, and to get started now, go to:

http://www.freescale.com/s08 and click on the LC60 page

USBSPYDER08

To aid fast and easy development for embedded systems engineers working on our low-end microcontrollers, Freescale has developed the low-cost, high-performance USB debug tool — the USBSPYDER08.

With the USBSPYDER08 you can:

- **SPY** into your application software
- **DEBUG** 8 leg 8-bit microcontrollers before you have your application board
- **KILL** bugs in your application software

This complete package delivers a low cost, yet powerful way to develop your products and speed time to market.

Features:

Small
- Targeted for small 8-pin 8-bit microcontrollers
- Dimensions: 25mm x 15mm x 75mm (approximately)

Simple
Basic Hardware interfaces included:
- **USB to BDM built-in circuitry** - Allows communication between Host PC and target microcontroller.
- **8-pin socket for the 8-bit device** - Supports QG, QD and KA 8-pin microcontrollers.
- **Header connector** - Allows easy access to MCU GPIOs
- **BDM header connector** - Allows the use of the USBSPYDER kit as a BDM interface to program or debug external QG, QD or KA devices.

Complete
Development environment completed with CodeWarrior Software package and Supporting Information.

The USBSPYDER08 supports RS08KA, S08QD and S08QG microcontroller families, all members of our pin and software compatible Freescale's Low-end Portfolio.

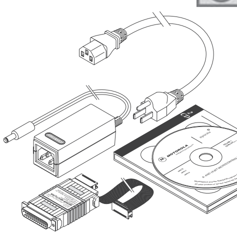
MultiLink

The MultiLink is an easy-to-use, low cost development tool for the Freescale HC(S)08 and HC(S)12 MCUs. It provides In-Circuit emulation, debugging and programming through the MON08 (HC08) and BDM (HC12, HCS08) interfaces.

Features: • Universal development tool for HC(S)08 and HC(S)12 MCUs • Real-Time In-Circuit emulation and debug • Fast In-Circuit programming • Auto-detects baud rate and frequency • Provides optional overdrive clock to target • Small size • Supports 2V to 5.5V • Auto-cycle power for security checks (up to 125mA) • Universal power supply (included). The M68CYCLONEPRO provides all the same capabilities of the MultiLinks, with the ability to function as a standalone programmer, with pushbuttons and LEDs to control operation. Also provides support for 1.8V operation.



M68CYCLONEPROE-ND	HC(S)08, HC(S)12, USB	**$563.89**
USBMULTILINK08E-ND	HC08s, USB	**$111.92**
USBMULTILINKBDME-ND	HC(S)08, HC(S)12, USB	**$111.92**

32-Bit Microcontrollers

ColdFire™ the highly integrated ColdFire series of processors allow for advanced performance at low cost. Rich peripheral sets and development tools make these processors both easy to use and highly functional. The variable length RISC architecture enable this processor to save system memory and cost. **PowerPC**™ series of processors from Freescale Semiconductor, Inc. are the ideal foundation for RISC embedded applications. Features include high scalability and code compatibility over the entire line. **M-Core**™ with an emphasis on low power consumption, the M-CORE series of processors are the ideal match for handheld and other low-power applications, which require high performance. **68K** series of processors are ideal for the engineer looking for high performance at a reduced cost. The wide array of 68K processors can suit most any application.

freescale semiconductor DSP Bit Development Tools

DSP56303EVM Kit

The DSP56303 Evaluation Module is designed as a low-cost platform for developing real-time software and hardware products to support applications in wireless, telecommunications and multimedia products using multi-line voice/date/fax processing, videoconferencing, audio applications, control and general digital signal processing. PC-compatible computer (90MHz or higher) running Windows 95 or NT4 with an RS-232 serial port. 12 Mbytes RAM, 3-1/2 inch diskette drive, CD-ROM drive, hard drive with 20 Mbytes of free disk space. Power supply 7-9 V AC or DC 500 mA with 2.1 mm coaxial connector, (not included) (recommended Digi-Key part number T353-P5P-ND). **Kit Contents:** • DSP56303EVM board • DSP56300 literature • Suite56 for Freescale DSP 563xx • Freescale The DSP56300 Family Documentation • Domain Technologies Debugger for DSP563xxEVM

DSP56303EVM-ND	**$282.63**
DSP563XXEVME-ND ***NEW!*** *– RoHS Compliant*	**$282.63**

DSP56309EVM Kit

The DSP56309 Evaluation Module (DSP56309EVM) is a low-cost platform for developing real-time software and hardware products to support a new generation of wireless, telecommunications and multimedia applications. The DSP56309EVM targets applications requiring a large amount of on-chip memory, such as wireless infrastructure applications. PC compatible computer (Pentium-90 MHz or higher) running Windows 95 (or higher) with an RS-232 serial port. Requires Power supply 7-9 VDC, 500mA, (not included) (recommended Digi-Key part number T353-P5P-ND). **Kit Contents:** • DSP56309EVM Board • GUI Debugger Software Disk • DSP56309EVM User's Manual and Other Documentation • Assembler Linker-Test files disk

DSP56309EVM-ND	**$310.95**

DSP56311EVM Kit

The DSP56311 Evaluation Module (EVM) is used to demonstrate the abilities of the DSP56311 device and provide a hardware tool to allow development of applications that use the DSP56311. The DSP56311EVM includes a DSP56311 device, peripheral expansion connectors, external memory and a voice codec. The peripheral expansion connectors allow for signal monitoring and user-feature expandability. **Kit Contents:** • DSP56311EVM Board • Parallel port extender cable • Plastic standoffs and plastic screws • DSP56300 Tools Software • Device and Tools Documentation • Tutorial/example software • DSP56311EVM Development Tools Release Notes • DSP56311EVM Product Installation Guide

DSP56311EVM-ND	**$395.68**

DSP56L307EVM Kit

The DSP56L307 Evaluation Module (EVM) is used to demonstrate the abilities of the DSP56L307 and provide a hardware tool allowing the development of applications that use the DSP56L307. It is an evaluation module board that includes a DSP56L307 part, peripheral expansion connectors, external memory and a voice codec. The peripheral expansion connectors are used for signal monitoring and user-feature expandability. The DSP56L307EVM is used to facilitate the evaluation of various features of the DSP56L307. It can be used to develop real-time software and hardware products based on the DSP56L307. It provides the features necessary for a user to write and debug software, to demonstrate the functionality of that software and to be able to interface with the customer's application specific device(s). The DSP56L307EVM is flexible enough to allow the user to fully exploit the features of the DSP56L307.

Kit Contents: • DS56L307EVM board • Parallel port extender cable • Plastic standoffs and plastic screws • Power supply, 12V, 1.2 Amps • Suite56 Software Development Tools CD-ROM • Documentation CD-ROM

DSP56L307EVM-ND	**$452.20**

DSP56F800DEMO Kit

The 56F800 Demonstration Board is used to demonstrate the abilities of the 56F800 family and to provide a hardware tool allowing the development of applications that use the 56F800 devices. The DSP56F800DEMO Kit is a low cost kit that contains everything you need to quickly evaluate the features and capabilities of the DSP56F800 silicon and tools. It also provides an excellent cost effective vehicle for hardware and software development. The DSP56F800DEMO Kit is targeted for use on PC Compatible systems running Windows 95, Windows 98 and Windows NT 4.0.

Kit Contents: • Demo board • Parallel cable • Complimentary CodeWarrior™ license, 8K word program memory limit • SDK CD • Instructions for kit • Training CD • US power supply

DSP56F800DEMO-ND	**$56.47**

MC56F8323EVM Kit

The MC56F8323EVM is a low-cost kit that contains everything you need to quickly evaluate the features and capabilities of the MC56F8322 and MC56F8323 hybrid controller silicon and tools. **Kit Contents:** • MC56F8323EVM board • Installation guide • Switch mode power supply (12 Volt) • Parallel cable • CodeWarrior™ • Development studio for 56800/E special edition

MC56F8323EVM-ND	**$337.91**

CodeWarrior™ Software

This industry-leading Integrated Development Environment (IDE) enables the engineer to generate highly optimized, ANSI-Compliant C and Assembly code.

Features: • Processor Expert generator for on-chip peripherals • Full Chip simulation • Includes assembler, linker, debugger and flash programmer

The Dongle allows for a single node-lock copy of CodeWarrior™ to be used on multiple computers

Panasonic® Flash Microcontrollers — 8-Bit

The MN101C series of 8-bit single-chip microcontroller incorporates multiple types of peripheral functions. This chip series is well suited for camera, VCR, MD, TV, CD, LD, printer, telephone, home automation products, pager, air conditioner, PPC remote control, fax machine, musical instrument and other applications. The MN101C series brings to embedded microcontroller applications flexible, optimized hardware configurations and simple efficient instruction set.

AM1 Starter Kit

Introductory starter kit for the FLASH MEMORY version of an 8-bit 1-chip CPU manufactured by Matsushita Electric Industrial Co., Ltd.

Features: • Equipped toggle-switches, serial communication function and LCD/LED display • C compiler and source code debugger • One-time C compiler upgrading is allowed from our website after purchasing • Simple debugger compatible with PanaX series with USB I/F • USB 1.1 for Host PC interface • Choice of USB 1.1 bus power or an external extension connector for power supply • CPU Board can be separately put in the evaluation system • Sample program and tutorial are included

Kit Contents: • USB Cable • External connection cable • CD • Software license and product warranty • Quick start up guide and registration guide • C source code debugger (Debug Factory Builder AM1 Starter Kit) • C compiler • CPU manual and sample program (MN101CF49K/70G/78A) • Online help-setup manual

AM1 Debug Probe

Features: • AM1 Debug Probe achieves onboard debugging by containing the debug monitor in the AM1 (MN101C) built-in flash memory of the user target and utilizing the AM1 (MN101C) serial port to communicate with PC. • The hardware of AM1 Debug Probe is common to AM1 (MN101C) series. When developing the other AM1 (MN101C) series, the new types can be added by purchasing the appropriate Debug Factory Builder. • Usable as a flash writer by programming the debug monitor in your AM1 (MN101C) in advance. • Simply started up with USB connection to PC. No external power supply is needed because AM1 Debug Probe operates by USB bus power.

Contents: • AM1 Debug Probe • Target connection cable • USB cable • Integrated programming development tool "DebugFactory Builder" (supporting 1 type) • Debug monitor programmed AM1 chip

MDP01-C49-ND	Debug Probe for MN101CF49KXN	**$636.00**

MDP01-C78-ND	Debug Probe for MN101CF78AXN	**$636.00**

DebugFactory Builder for AM1 Debug Probe

Features: • Integrated development tool for the programming of AM1 (MN101C) series • Provides efficient debug environments, such as C source code leveled step execution, inspection, watching, breakpoint setting, etc. • Easy-to-switch with simple operation eases effective development work • Included with Evaluation Kits

Contents: • Editor • Make tool • Debugger

8-Bit

This XC800 family of 8-bit microcontrollers offer a wide selection of products, combining a high performance 8051 core with on-chip Flash and ROM memory as well as a powerful mix of peripherals such as an enhanced CAPCOM6 (CC6), CAN, LIN and 10 bit ADC.

Based on the 8051 the C505CA enhances the C500 family of 8-bit microcontrollers by providing 32KByte of OTP or 16/32 KByte of ROM, 256 Byte of RAM, 1 KByte of XRAM, Controller Area Network (CAN) Version 2.0B, an asynchronous/synchronous serial interface and highly accurate 10-bit Analog to Digital Converter integrated on chip.

16-Bit

Infineon's C166 Family, with pipelined 16-bit core architecture and optimized real-time embedded control peripherals, offers a wide range of performance variations. • C161: Cost optimized CPU and peripheral set control • C164: Lower pin count and price with excellent PWM capabilities and CAN apps • C165: Processor-oriented microcontroller with basic peripheral set • C167: High-end 16-bit microcontroller with on-chip CAN. The XC164CM series is the new family of enhanced 16-bit microcontroller XC166 which offers impressive DSP performance and advanced interrupt handling combined with a powerful integrated peripheral set, high performance and reliable on-chip Flash memory

NEW! Microcontrollers *(Cont.)*

32-Bit

The TriCore™ is the first unified, single-core, 32-bit microcontroller-DSP architecture optimized for real-time embedded systems. The TriCore Instruction Set Architecture (ISA) combines the real-time capability of a microcontroller, the computational power of a DSP, and the high performance/price features of a RISC load/store architecture, in a compact re-programmable core.

NEW!

PK51 Professional Developer's Kit

The PK51 Professional Developer's Kit for the 8051 microcontroller family supports all 8051 derivatives including new devices with extended memory and instruction sets. On-chip peripherals and other key features of the 8051 are easy to access with the PK51 Professional Developer's Kit.

PK51-ND.. **$2895.00**

CA51 Compiler Kit

The CA51 Compiler Kit for the 8051 microcontroller family supports all 8051 derivatives including classic devices and IP cores from companies like Analog Devices, Atmel, Cypress Semiconductor, Dallas Semiconductor, Infineon, Intel, NXP, Silicon Labs, STMicroelectronics, Texas Instruments, and Winbond. On Chip peripherals and other key features of the 8051 are easy to access with the CA51 Compiler Kit.

CA51-ND.. **$1695.00**

RealView® Microcontroller Development Kit

The RealView Microcontroller Development Kit (MDK) supports ARM7, ARM9, and Cortex-M3 technology-based microcontrollers from Analog Devices, Atmel, Freescale, Luminary, NXP, OKI, Samsung, Sharp, STMicroelectronics, and Texas Instruments.

MDK-ARM-ND.. **$4095.00**

RealView® Real-Time Library

The RealView Real-Time Library is a collection of tightly-coupled libraries that are designed to solve the real-time and communication challenges of embedded systems based on ARM powered MCU devices. It also includes several drivers that interface the RTX Real-Time with various communication interfaces.

RTL-ARM-ND.. **$4195.00**

DB-ARM Debugger Kit

The DB-ARM Debugger Kit for the ARM microcontroller family supports ARM derivatives from Analog Devices, Atmel, NXP, Samsung, Sharp, and STMicroelectronics. This kit is perfect for the developer who requires sophisticated debugging support for existing GNU or RealView/ADS projects.

DB-ARM-ND.. **$2295.00**

ULINK USB-JTAG Adapter

The ULINK USB Interface Adapter connects your PC's USB port to your target hardware (via JTAG or OCDS) and allows you to debug embedded programs running on target hardware.

ULINK 2-ND.. **$300.00**

MCB2140 Evaluation Board

The MCB2140 Evaluation Board introduces you to the NXP LPC2140 ARM family and allows you to create and test working programs for the advanced architecture. The board connects to your PC using the serial port (for Flash download using the NXP LPC210x FLASH ISP Utility) or the JTAG interface (for program debug using Keil ULINK USB-JTAG Adapter and the µVision IDE and Debugger). An on-chip USB interface, two serial interfaces, a speaker, analog input (via potentiometer), and eight LEDs make this board a great starting point for your next ARM project.

MCB2140-ND.. **$179.00**

MCBXC866 Evaluation Board

The MCBXC866 Evaluation Board introduces you to the Infineon XC800 microcontroller family and allows you to create and test working programs for this 8051-based architecture. Serial and CAN interfaces, analog input (via potentiometer), and eight LED's (on Port 3) make this board a great starting point for your next 8051 project.

MCBXC866-ND.. **$149.00**

MCBXC88x Evaluation Board

The MCBXC88x Evaluation Board introduces you to the Infineon XC88x microcontroller family and allows you to create and test working programs for this 8051-based architecture. The CAN interface, analog input (via potentiometer), and eight LED's (on Port 3) make this board a great starting point for your next 8051 project.

MCBXC88x-ND.. **$149.00**

MCBXC167 Evaluation Board

The MCBXC167 Evaluation Board introduces you to the Infineon XC16x microcontroller family and allows you to create and test working programs for this advanced architecture. The board connects to your PC using the serial port (for Flash download) or the OCDS interface (for program debug using Keil ULINK USB-JTAG Adapter and the µVision IDE and Debugger).

MCBXC167-BASIC-ND.. **$149.00**

MCBSTR7 Evaluation Board

The MCBSTR7 Evaluation Board introduces you to the STMicroelectronics STR710 ARM family and allows you to create and test working programs for this advanced architecture. The board connects to your PC using the serial port (for Flash download) or the JTAG interface (for program debug using Keil ULINK USB-JTAG Adapter and the µVision IDE and Debugger).

MCBSTR7-ND.. **$149.00**

MCBSTR9 Evaluation Board

The MCBSTR9 Evaluation Board introduces you to the STMicroelectronics ARM9 family and allows you to create and test working programs for this advanced architecture. The board connects to your PC using the JTAG interface (for program debug using Keil ULINK USB-JTAG Adapter and the µVision IDE and Debugger). It provides serial (RS-232), CAN, Ethernet, and USB interfaces as well as eight LEDs, analog input (via potentiometer) and several push buttons.

MCBSTR9-ND.. **$229.00**

MCBx51 Evaluation Board

The MCBx51 single-board computer is an evaluation board that supports numerous 8051-compatible and 251-compatible devices. The MCBx51 allows you to investigate the capabilites of the 8051 and 251 and create real working programs with the Keil development tools. The MCBx51 works with any 44-pin 8051-compatible or 251-compatible device.

MCBx51-ND.. **$295.00**

MCB950 Evaluation Board

The MCB950 Evaluation Board is a versatile, flexible prototype board for the NXP P89LPC952 microcontroller family. It includes the Keil µVision LPC Development Studio which allows you to create and debug programs that program into the on-chip Flash ROM using FlashMagic.

MCB950-ND.. **$129.00**

Sensor Head Board

A small PCB that houses the sensor together with all necessary discrete components. Head board is compatible with the evaluation kit.

Note: *Head Board is not included with Evaluation Kit*

KAC-9637/HDBRD-ND......... **$270.00**

Sensor Lens Kits

1/5" lens kit for the KAC-9630 image sensor includes 2 lenses (single element plastic lens and low profile single element lens).

3F5394-ND.. **$105.00**

Sensor Evaluation Kit

This software/hardware solution is designed to give the system designer a complete raw data evaluation toolset. Snapshots of any scene can be taken and the raw data of the captured image can be downloaded to a PC through the parallel port. Also included is SNAPS image processing software, which can be used to view and apply different image processing algorithms to the raw data of a captured image. **Kit Contents:** • Dual-board base • C-mount block • C-mount lens • Power supply • Cables

KAC-96XXEVAL-KIT-ND **$2992.50**

Sensor Evaluation Kit for KAC-5000

The Compact Demo Unit (CDU) has been designed specifically for Kodak's CMOS image sensors. This system allows camera designers to evaluate the performance of the CMOS image sensors. Snapshots or video clips can be taken and uploaded to a PC through a standard USB 2.0 port. The evaluation system includes Kodak Sensor Studio 2 (SS2) which is used to view, analyze, process and save the acquired data. All internal registers of the CMOS image sensor attached to a CDU system can be programmed directly via SS2.

Features:

Hardware: • Connection to USB 2.0 port for upload commands • Image and video clips capture **Software:** • Control of the CDU Hardware • Reading and writing to all user registers • Upload and viewing of an image • Export of data of captured images to external image processing software • Image Analysis Tools

KEK-4H0801-KAC-5000-ND **Kit Contents**: • Imager Board • USB CDU Board • SS2 Software **$2660.00**

Micron

CMOS Image Sensors

RoHS COMPLIANT

VGA

Micron's VGA resolution sensors feature a resolution of 640 X 480 and offer on-chip camera functions and very low power consumption for extending battery life. Plus, variable functions; including gain, frame rate, and exposure; can be programmed through a simple two-wire serial interface.

Optical Format	Array	Resolution	Color Filter	Supply Voltage	Frame Rate (fps)	Package	Digi-Key Part No.	Price Each 1	5	10	Micron Part No.

Megapixel

Micron's megapixel-resolution sensors combine the image quality of CCD technology with the compact size, adaptability, and ease-of-design of CMOS. CMOS-based technology can simplify camera designs compared to conventional CCD technology, thereby enabling designers to create smaller, high-performance applications with shorter development periods.

Optical Format	Array	Resolution	Color Filter	Supply Voltage	Frame Rate (fps)	Package	Digi-Key Part No.	Price Each 1	5	10	Micron Part No.

Image Sensor Evaluation Kits

Micron Imaging's Demonstration system family supports the full line of Micron's CMOS image sensor products. Several software applications are provided with the demonstration system, which allows the user to display the data from the sensor on the host computer, and to change some basic settings of the sensor for evaluation purposes. A Software Development Kit (SDK) is also provided to customers who wish to write their own software applications to access the sensor on the Demo System.

Kit Includes: • Imaging Demo Camera Board • Sensor Head with Lens • USB 2.0 Cable • Tripod • Software • Users Manual

557-1156-ND	For use with MT9M001	**$1091.84**
557-1170-ND	For use with MT9V403, Color	**$10973.07**
557-1163-ND	For use with MT9T001	**$1124.33**
557-1159-ND	For use with MT9M413, Monochrome	**$10973.07**
557-1157-ND	For use with MT9M413, Color	**$7975.89**
557-1160-ND*	For use with MT9M413, Monochrome	**$10634.52**
557-1158-ND*	For use with MT9M413, Color	**$10634.52**

* With Frame Grabber

Sensor Head Boards

The Sensor Head Boards include the image sensor and lens mounted with all necessary components.

The Sensor Head Boards will connect to the Demo02 board (not included) to make a complete development system.

557-1165-ND	For use with MT9T001	**$323.00**
557-1204-ND	For use with MT9V022	**$323.00**

*i*Sensor™ Motion Sensor Products

By embedding motion sensing in your application, valuable improvements can be realized in precision, response time, reliability, safety, and security. Analog Devices' highly integrated, calibrated, and simple-to-implement *i*Sensor™ products make realizing those improvements easier and more cost-effective than ever before.

Introduction

Typical *i*Sensor integration allows system insertion with only power supply and a serial port interface. Precision factory calibration means no additional in-system motion test or calibration is required, which saves substantial equipment costs and production test time. Basic sensor tuning is accomplished post system insertion, via simple SPI commands. With solutions ranging from simple digital output inertial sensors to full six-degree-of-freedom IMUs, *i*Sensor products make motion sensing accessible to everyone, at 10x to 100x size savings and 5x to 10x cost savings.

ADIS16003/ADIS16006/ADIS16080/ADIS16100

Digital Output Accelerometers and Gyroscopes

For lowest cost and power, as well as smallest form factor, the following *i*Sensor products provide simple interfacing to combined inertial plus temperature sensors, over the industry standard SPI interface.

- ADIS16003: ±1.7 *g* acceleration sensing, dual axis
- ADIS16006: ±5 *g* acceleration sensing, dual axis
- ADIS16080: 80°/sec angular rate sensing, single axis
- ADIS16100: 300°/sec angular rate sensing, single axis

ADIS16120

Low Noise Angular Rate Sensor

The ADIS16120 gyros provide angular rate detection to the highest performance applications. Employs unique internal architectures to minimize noise and reduce sensitivity to vibration, supply, and temperature variations. The ADIS16120 has an analog interface. With a dynamic range of 300°/sec, 320 Hz bandwidth response, and fast turn-on time of 35 ms, they are ideally suited for standby navigation systems and precision instrumentation applications.

ADIS16201/ADIS16203

Programmable Dual-Axis Accelerometers and Inclinometers

The ADIS16201 is a dual-axis accelerometer, factory calibrated and fully programmable over a simple SPI interface. The core sensor provides a 1.7 *g* response in the x and y axis, and also has an embedded temperature sensor. The ADIS16201 also directly outputs the linear inclination (tilt) angle of the component. Factory calibration provides a highly stable bias and sensitivity, which can also be in-system tuned with a simple auto-zero command, which, for instance, will align the components zero-degree reference with the system axis. All critical parameters are programmable over the SPI port, allowing in-system tuning of digital filtering, rate/threshold alarms, sample rate, and power modes. Design complexity and implementation time are further reduced with single supply operation, auxiliary I/O ports, and a digital self test feature. For tilt sensing, the ADIS16201 provides two axes of linear inclination angle across ±90°, while the ADIS16203 provides a single-axis 360° response. These components are available in an 9.2 mm x 9.2 mm x 3.9 mm laminate-based land grid array package, and operate from -40°C to +125°C.

ADIS16250/ADIS16251/ADIS16255

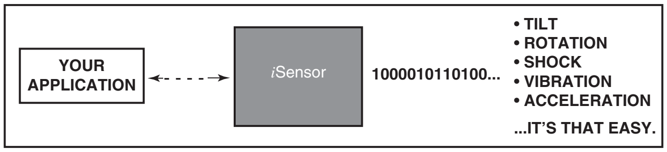
Programmable Low Power Angular Rate Sensors

The ADIS16250, ADIS16251, and ADIS16255 gyroscopes provide angular rate and temperature sensing via a simple programmable SPI interface. The core gyro sensor is factory calibrated, delivering an in-run bias stability of 0.016°/sec. The ADIS16255 includes temperature calibration, improving in-system stability to as tight as 0.005°/sec/°C. These are the industry's first devices to offer digital range scaling, with options covering ±20°/sec to ±320°/sec, allowing selection of the best device sensitivity for the target application. All critical parameters are programmable over the SPI port, allowing in-system tuning of digital filtering, rate/threshold alarms, sample rate, and power modes. Design complexity and implementation time are further reduced with single-supply operation, auxiliary I/O ports, and a digital self test feature. These components are available in 11 mm x 11 mm x 5.5 mm laminate-based land grid array packages.

ADIS16204

Programmable Dual-Axis Digital High-*g* Accelerometer and Impact Sensor

With an internal high-*g* MEMS sensor (±70 *g* x-axis, ±37 *g* y-axis), the ADIS16204 is ideally suited for applications in impact detection, condition monitoring, safety/shut-off sensing, shock recording, and security systems. The only required interfaces are power supply and an SPI interface. The device includes an embedded programmable event recorder which captures peak events, RSS values, and a user-selectable 250 ms window of data around the desired event. The SPI port also provides access to temperature and power-supply readings. Design complexity and implementation time are further reduced with single-supply operation, auxiliary I/O ports, configurable trigger levels and power modes, and a digital self test feature. It is available in a 9.2 mm x 9.2 mm x 3.9 mm laminate-based land grid array package, and operates from -40°C to +105°C.



analog is everywhere.™

ANALOG DEVICES

Blackfin Processor with Flash Memory for Industrial and Peripheral Intensive Applications

The Blackfin® Processor family has been expanded to address the ever-increasing need for more connection possibilities with two new family members. This connectivity is coupled with the high performance 16-/32-bit Blackfin embedded processor core, the flexible cache architecture, the enhanced DMA subsystem, and the Dynamic Power Management (DPM) functionality. System designers can take advantage of the combined control and signal processing capabilities of the processor core across a wide range of end applications through code compatibility of these new family members with existing Blackfin offerings.

A new addition to the Blackfin Processor family is the inclusion of integrated FLASH memory alongside the processor. There are two choices available in the ADSP-BF538F family, one with 512KB of onboard FLASH memory and one with 1MB of onboard FLASH memory. Both offer large code space for complex embedded systems and fast access time to the Blackfin core. This is in addition to the complementary Blackfin Processor memory system that offers a powerful and flexible cache architecture that can dynamically balance between the hard real-time tasks desired in SRAM and soft real-time control tasks and an Operating System (OS) requiring cache functionality.

Designed as an Integrated System

In addition to the embedded connectivity of CAN, the ADSP-BF538 processors include a variety of general purpose functions designed to minimize external IC count and offer broad control and communication. Peripherals include three SPI®-compatible ports, three UARTs, four SPORT ports, three multifunction timers, 54 general-purpose I/Os, dual Two-Wire Interface for I2C operation, a real-time clock, a watchdog timer, an event controller, and a JTAG/debug interface. The flexible Parallel Peripheral Interface (PPI) offers a direct connection to a variety of video encoders/decoders, display drivers, image sensors, and general-purpose converters.

Development Tools

Blackfin Processors are supported by:

— Analog Devices CROSSCORE® brand of industry leading development tools. The CROSSCORE components include the VisualDSP++® software development environment, EZ-KIT Lite® evaluation systems, EZ-Extender™ daughter boards, and PCI-based or USB-based emulators.

— Green Hills® Software award-winning MULTI® Embedded Software Development Environment and associated emulators.

The Blackfin Processor is Supported by Analog Devices Line of Robust and Flexible Development Tools

VisualDSP++®

VisualDSP++ delivers efficient project management, enabling programmers to move easily between editing, building, and debugging within a single interface.

Key features include:

- Optimizing C/C++ compiler
- Advanced plotting tools
- Embedded OS support (VDK)
- Award-winning statistical profiling
- TCP/IP and USB support
- Free software upgrades
- Free technical support

EZ-Extender®

A variety of Blackfin EZ-Extender daughter boards are available that allow developers to connect to a number of Analog Devices High Speed Converter (HSC) evaluation boards, camera evaluation boards, and external displays. Some of the EZ-Extenders contain a USB 2.0 interface and 10/100 Ethernet MAC and advanced audio and video circuitry.

EZ-KIT Lite® Evaluation Platform

A cost-effective method for initial evaluation and for learning more about ADI hardware and software development and prototype applications.

Green Hills® Software (GHS)

Along with Analog Devices, Green Hills Software has developed a multiyear product road map for hardware and software development tools, providing full support for the Blackfin Processor.

These include:

- MULTI® Integrated Development Environment (IDE)
- C, C++, and EC++ compilers
- Green Hills® Probe and Slingshot™ Hardware Debug Devices
- INTEGRITY® Real-Time Operating System
- *velOSity*™ Microkernel

From simulation to deployment, GHS technology saves time throughout a project development life cycle with powerful features and an efficient design that eliminates having to learn different tools and user interfaces.

Emulators

Analog Devices offers two High Performance (HP) emulator options for the Blackfin Processor. The HP PCI based emulator and the HP USB 2.0 based emulator deliver seamless exchange of real-time data from the host to the target application. These emulators are designed to take advantage of advanced features, such as the Background Telemetry Channel (BTC), a non-intrusive method for exchanging data between the host and target application without affecting the target system's real-time extended support characteristics.

Analog Devices also offers a USB 1.0 based emulator for the Blackfin Processor. This emulator offers the ease of use and portability associated with USB technology at a reduced price point.

Blackfin Test Integration Toolkit for NI LabVIEW

National Instruments LabVIEW toolkit provides a high level method for easily building test systems and utilities for Blackfin Processor systems.

By integrating testing, engineers can iteratively verify their design throughout the development process.

Early use of the Test Integration Toolkit reduces overall development time and improves the quality of products that use the Blackfin Processor.

LabVIEW Embedded Module for Blackfin Processors

The NI LabVIEW™ Embedded Module for Analog Devices Blackfin® Processors is a comprehensive graphical development environment for embedded design.

Jointly developed by ADI and NI, this module seamlessly integrates the LabVIEW Development Environment and Blackfin Embedded Processors.

Included in the LabVIEW Embedded Module is everything required to develop your application quickly in LabVIEW and ultimately target a custom-developed hardware solution, taking designs from concept to production in a single integrated development environment.

By using this approach, engineers and scientists can achieve faster development times, lower development cost, and still deliver a high performance embedded processing solution.

ANALOG DEVICES

Digital Signal Processors

ADI's embedded architectures feature simple yet powerful programming models and are supported by high quality development tools.

Blackfin® Processors: A new breed of embedded media processor designed specifically to meet the computational demands and power constraints of today's embedded audio, video and communications applications. Blackfin Processors combine a 32-bit RISC-like instruction set and dual 16-bit Multiply Accumulate signal processing functionality with the ease-of-use attributes found in general purpose microcontrollers.

TigerSHARC® Processors: This family offers the industry's highest performance per watt and per square inch of board space for the most demanding signal and image processing applications. The TigerSHARC's patented link port technology allows glueless interprocessor communication with arrays of two or more TigerSHARC Processors.

SHARC® DSPs: Using ADI's "Super" Harvard architecture, the SHARC family is optimized to enable a variety of real-time embedded signal processing applications and is known as a leader in premium audio applications.

ADSP-21xx/2199x and Mixed-Signal DSPs: The ADSP-21xx family architecture is built around a common instruction set architecture. All family members are code-compatible, fixed-point 16-bit DSPs. In addition, the ADSP-2199x family of mixed-signal DSPs provides a single-chip solution with signal processing and 14-bit ADC mixed signal integration.

VisualDSP++™ Integrated Development Environment

VisualDSP++ is an easy to install and easy to use integrated software development and debugging environment that enables efficient management of projects from start to finish from within a single interface. VisualDSP++ supports all Analog Devices processor families. **Contents:** • Assembler • Linker • Simulator • C/C++ compiler • Debugger • PROM splitter • Graphical plotting • Expert Linker • Math, DSP and C/C++ runtime library • Integrated development environment • VisualDSP++ Kernel • Statistical profiling • VisualDSP++ Component Software Engineering *(**Note:** ADSP-218x does not have C++ support.)*

EZ-KIT Lite™ Evaluation Kit

The EZ-KIT Lite provides an easy way to evaluate the power of ADI's processors and begin to develop applications. **Kit Contents:** • Stand-alone evaluation board • Evaluation suite of VisualDSP++ to facilitate architecture evaluations via a PC-hosted tool set.

EZ-KIT Lite users can:
• Evaluate ADI's processors • Learn about DSP applications • Simulate and debug applications • Prototype applications

Precision Analog Microcontrollers

MicroConverter™ ICs were the first to integrate true 12-bit to 24-bit analog precision ADCs, in-circuit reprogrammable Flash/EE memory and an on-chip 8052 or ARM core. Applications include industrial, instrumentation, communications, and automotive control. **Features: Precision Analog:** • 12-bit to 24-bit ADC resolution • Sample rates up to 1Msps • Flexible ADC input multiplexing • Programmable gain differential inputs • Self-calibration • On-chip 2.5V band gap reference • Single, dual or quad rail-to-rail DAC **Integrated Programmable Peripherals:** • 8052 or ARM7 MCU core (up to 45 MIPS) • Flash/EE code memory (up to 62k) • Flash/EE data memory (up to 4k) • RAM (up to 8k) • Flexible SPI, I^{2}C, and UART serial ports • High speed baud rate generator • Multiple PWM outputs

QuickStart Development Kit

The "entry level" QuickStart Development System allows designers to rapidly evaluate MicroConverter performance and functionality, and then begin a prototype development. It fully supports assembly level code development via a serial port debug path and provides designers with access to a demonstration project of the C-level development environment available in QuickStart-Plus.

Kit Contents: • Evaluation Board • Serial Download/Debug Cable • Sample Device(s) • International Power Supply • Software and Documentation

ARM7 Development Kits

Kit Contents:
- Software Development Tools
- Power Supply (Not included in Mini-Kit)
- Cables
- Evaluation Board
- JTAG Emulator (QSP only)

EVAL-ADUC7024QS-ND	**$90.67**
EVAL-ADUC7026QSZ-ND	**$90.66**
EVAL-ADUC7026QSP-ND	**$313.33**
EVAL-ADUC7020MK-ND	**$33.33**

Everywhere you imagine. RENESAS

SuperH Flash MCU — Superscalar performance, high-speed on-chip flash memory access, and much more

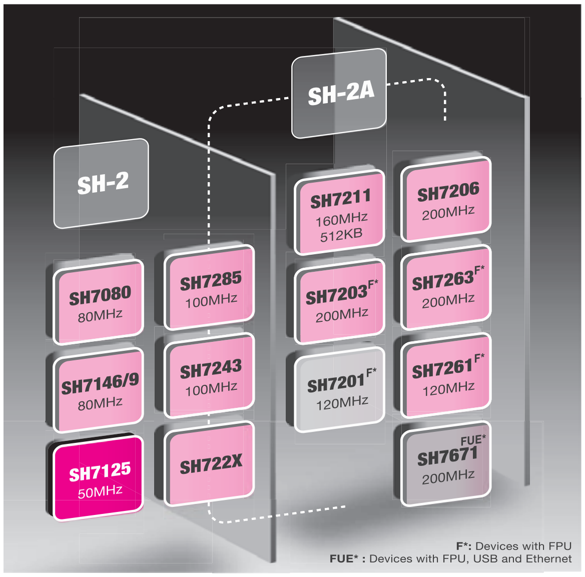
The 32-bit microcontrollers in the Renesas SuperH family span a wide performance range. They deliver the processing required by today's sophisticated designs and those of tomorrow — and do so at the moderate levels of power consumption essential for embedded system designs. From devices with the 50MHz SH-2 CPU to those with the 200MHz superscalar SH-2A CPU, the upward-compatible product series in the SuperH family are modern microcontrollers that span many price/performance points and provide optimized peripheral sets.

Enhanced features, including a floating-point unit (FPU), MAC, high-speed barrel shifter, and abundant addressing modes, offer DSP-like performance with RISC-style programming. Renesas' high-density, high-performance MONOS flash memory technology offers single-cycle access to on-chip flash memory at up to 160MHz clock rates for high throughput. These and other SuperH features enable cost-effective system implementations with major advantages. The microcontrollers shorten design cycles for capitalizing on market opportunities, too, because they're supported by comprehensive, easy-to-use Renesas HW/SW tools, plus operating systems, drivers, middleware, consulting services, etc., from many suppliers.

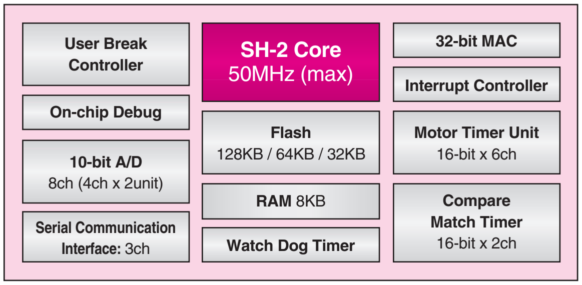
The SH7125, a member of the SH Tiny series, is a solid performer—a low-cost MCU with up to 128KB of on-chip flash, 32-bit MAC, and 6-channel timer, among other peripherals. It is ideal for applications in areas such as industrial (inverters, factory automation), white goods (air conditioners, clothes washers), automotive (electric power steering) and more.

Take advantage of the inexpensive SuperH development kit. This reference platform is an excellent tool for learning and evaluating the SH7125 and discovering the benefits of the SuperH architecture. It's a great way to jump-start new system designs, too!

SuperH MCU Roadmap



SH7125 Block Diagram



User Break Controller
SH-2 Core 50MHz (max)
32-bit MAC
Interrupt Controller
On-chip Debug
Flash 128KB / 64KB / 32KB
Motor Timer Unit 16-bit x 6ch
10-bit A/D 8ch (4ch x 2unit)
RAM 8KB
Compare Match Timer 16-bit x 2ch
Serial Communication Interface: 3ch
Watch Dog Timer

Specifications for SH7125 MCUs

Operating Voltage: 5.0v
Max. Operating Frequency: 50MHz
Multiplier: 32-bit x 32-bit
Serial I/O: Serial Communication Interface (3ch)
Multifunction Motor Timer Unit: 16-bit x 6ch
Compare Match Timer: 16-bit x 2ch
Watch Dog Timer
A/D Converter: 10-bit, 8ch
Interrupt Controller: 4-External, 1-NMI
Port Output Function Controller

SH7125 Development Kits

Renesas Starter Kit:

- SuperH MCU Dev. Board
- **HEW** (High Performance Embedded Workshop)
- Sample Projects
- Quick-start Guide
- E8 On-Chip Debug Emulator
- Reference Schematics

SuperH MCU Key Application Areas:

- Industrial Control
- HVAC
- Motor Control
- General Purpose

Order Now! Renesas Starter Kit for SH7125
http://america.renesas.com
Part number **R0K571242S000BE**

H8 Family

H8 Value Series

Renesas Value Series Microcontrollers are low-cost embedded solutions with a 16-bit high performance CPU with up to 128KB of flash memory and high integration of on-chip peripherals

Memory Type	ROM Bytes	Data Flash Bytes	RAM Bytes	A/D	D/A	Serial Communication	Timers 8/16/32	GPIO	Operating Frequency/ Supply Voltage	Temperature	Package	Digi Key Part No.	Price Each

H8 Tiny Series

The H8/Tiny series of MCUs provide 16-bit performance and high peripheral integration ideal for many 8-bit applications.

H8 Super Low Power

H8/300L and H8/300H Super Low Power series of MCUs are designed for optimum power consumption and fit in applications where battery life is critical. A built-in LCD controller is included on large packages (64-100 pins).

H8/300 Series

H8/300H and H8/300L Series of MCUs provide extensive support of customers system requirements with a high level of peripheral functionality.

H8S Family

The H8S Family meets the growing demands for system designs requiring the performance of 16-bit microcontrollers with sophisticated peripherals integrated on-chip. The H8S is the leader in memory size capacity with up to 512K on-chip flash. It includes performance speeds as high as 33MHz, extremely low power consumption, and offers a wide selection of peripherals for optimizing system cost, development time, performance, and features.

M16C Family

The M16C family offers the industry's broadcast multi-purpose microcontroller platform, with seamless code and pin compatibility – all the way from 8-bit to 32-bit functionality. A robust platform of 16/32-bit CISC microcontrollers with speeds form 16 MHz to 64 MHz, up to 512K on-chip flash memory, high ROM code efficiency, extensive EMI /EMS noise immunity, and very low power consumption. It also features a broad choice of standard on-chip peripheral options and the highest pin-to-pin compatibility (up to 144 pins) in the industry.

R8C Tiny Series

The R8C 16-bit microcontrollers are small in size, yet big in performance and value. They excel for 8-bit embedded system applications that need low-cost devices and deliver high performance, yet save space with small, low-pin count packages. These microcontrollers for general purpose applications deliver up to 20MHz speed, up to 96K of on-chip flash memory, offer versatile peripherals, and are packaged with 80 pins or less. Based on the MC16 family of 16-bit microcontrollers, the R8C Tiny inherits the same features of high performance, ROM code efficiency, low power consumption, and low noise, while its instruction compatibility allows the use of existing M16C family software resources.

SuperH™ Family

SuperH is an embedded RISC developed for high performance, miniaturization and performance per power consumption (MIPS/W). We are developing CPU cores for a wide range of applications and functions and have many products. Our product lines include the series with SH-2 as the CPU core with on-chip large capacity flash memory and peripheral functions such as timer, serial and AD converter, and the series with SH-3 and SH-4 as the CPU core which enable high-speed data processing and come equipped with cache and MMU. Additionally, there is lineup of series with SH2-DSP and SH3-DSP as the CPU core, which have full DSP funcitons and an emphasis on multimedia processing and communications processing. Currently available series (products) also have lots of features such as low power mode, contributing to low power consumption and miniaturization for application hardware. Various versatile operating systems and development tools have been improved and, crucially, more effecient development can be achieved.

OPTICHRON

Analog-to-Digital Converters

Optichron's high performance 14-bit, 80 to 125 MSPS data converter modules in BGA form factor powered by Turbolinear™ technology offer ultra-high linearity for designs requiring a critical boost in ADC performance.

The advanced buffer-amplifier plus analog-to-digital converter modules not only provide system designers much-valued linearity but also a greater command of design tradeoffs between speed, performance power dissipation and cost.

By eliminating a key performance constraint, nonlinear distortion in the buffer amp and ADC, our ultra-linear modules, powered by our Turbolinear technology, offer design engineers high signal fidelity at very high signal frequencies while increasing system speed and improving analog performance.

OM1400A-105

This is a high-speed and high-performance analog-to-digital converter module optimized to achieve and exceptionally high linearity when digitizing signals of very high IF.

The module has a sampling rate of 105 MSPS and is primarily built around Optichron's Linearizer with Turbolinear technology in addition to a 14-bit AD6645 analog-to-digital converter and AD8351 buffer amplifier, which provides a buffered, single-ended 50 ohm input.

The module output is a digitized signal optimized for up to 25 dB improvement in SFDR when sub-sampling signals in the 1st, 2nd, 3rd and 4th Nyquist zones.

Features:

• 14-bit resolution, 105 MSPS sampling rate • IF sampling to 205 MHz • 5 dBm full scale input power • Single-ended, 50 ohm analog input buffer • Selectable 2's complement or binary outputs • 3.3V CMOS compatible • Output clock for data output latching • Module power dissipation: 2.8W • BGA footprint

578-1001-ND Evaluation Board **$895.00**

CIRRUS LOGIC®

CODEC

CS4270 Evaluation Board

Using the CDB4270 is an excellent way to evaluate the CS4270 CODEC. System timing for the I^{2}S, Left-Justified or Right-Justified audio data formats can be provided by the CS4270, by the CS8416, or by a device connected to the on-board DSP I/O header.

The board may also be configured to accept external timing and data signals. RCA jacks are provided for the analog audio inputs and outputs. Digital S/PDIF transmit or receive data I/O is available via either RCA jacks or optical connectors.

The Windows® GUI software provided allows for easy configuration of the CDB4270. The GUI software communicates with the board via a serial port connection to configure the CS4270 Control Port registers so that all features of the CS4270 can be evaluated.

Features:

• Header for External Configuration of CS4270 • Header for External DSP Serial Audio I/O • Pre-Defined Software Scripts • Demonstrates Recommended Layout

598-1002-ND (CDB4270) **$360.00**

CS4272 Evaluation Board

The CDB4272 demonstrates the CS4272 stereo CODEC. Evaluation requires an analog/digital signal source and analyzer, and power supplies. Optionally, a Windows® PC compatible computer may be used to evaluate the CS4272 in control port mode.

System timing can be provided by the CS4272, by the CS8416 phase-locked to its S/PDIF input, by an I/O stake header or by an on-board oscillator. RCA phone jacks and Balanced XLR jacks are provided for the CS4272 analog inputs. Digital data I/O is available via RCA phone or optical connectors to the CS8416 and CS8406.

Microsoft Windows® software provides a GUI to make configuration of the board easy. The software communicates through the PC's parallel port to configure the hardware so that all features can be evaluated. The board may also be configured to accept external timing and data signals for operation in a user application during system development.

598-1004-ND (CDB4272) **$360.00**

CS4265 Evaluation Board

The CDB4265 evaluation board is an excellent means for evaluating the CS4265 CODEC. System timing for I^{2}S, Left-Justified and Right-Justified interface formats can be provided by the CS4265, the CS8416, or by a PCM I/O stake header with an external source connected.

RCA phono jacks are provided for the CS4265 analog inputs and outputs. Digital data I/O is available via RCA phono or optical connectors to the CS8416 and CS4265. The Windows® software provides a GUI to make configuration of the CDB4265 easy. The software communicates through the PC's serial port to configure the control port registers so that all features of the CS4265 can be evaluated.

The board may also be configured to accept external timing and data signals for operation in a user application during system development.

Features:

• Coaxial and Optical Connections for CS4265 S/PDIF Transmitter Output • CS8416 S/PDIF Digital Audio Receiver • Header for external PCM serial audio I/O • 3.3 V Logic Interface • Pre-defined Software Scripts • Windows Compatible Software Interface

598-1001-ND (CDB4265) **$480.00**

CS4271 Evaluation Board

This is an excellent means for evaluating the CS4271 stereo CODEC. Evaluation requires an analog/digital signal source, and analyzer, and power supplies. Windows PC compatible computer may be used to evaluate the CS4271 in control port mode.

System timing can be provided by the CS4271, by the CS8416 phase-locked to its S/PDIF input, by an I/O stake header or by an on-board oscillator. RCA phono jacks are provided for the CS4271 analog outputs and inputs. Digital data I/O is available via RCA phono or optical connectors to the CS8416 and CS8406.

Microsoft Windows® software provided a GUI to make configuration of the board easy. The software communicates through the PC's parallel port to configure the hardware so that all features can be evaluated.

Features:

• Single-ended inputs • CS8406 S/PDIF digital audio transmitter • CS8416 S/PDIF digital audio receiver • Header for optional external configuration of CS4271 • Header for external DSP serial audio I/O • 3.3V to 5.0V Logic Interface

598-1003-ND (CDB4271) **$360.00**

CS42L51 Evaluation Board

The CDB42L51 evaluation board is an excellent means for evaluating the CS42L51 CODEC. System timing can be provided by the CS8415, by the CS42L51 with supplied master clock, or b and I/O stake header with a DSP connected.

RCA phono jacks are provided for the CS42L51 analog inputs and outputs. 1/18th inch jacks are also available for microphone input and headphone output. Digital data I/O is available via RCA phono or optical connectors.

The Windows® software provides a GUI to make configuration of the CDB42L51 easy. The evaluation board may also be configured to accept external timing and data signals for operation in a user application during system development.

Features: • MUX's Analog Output • 8-96 kHz S/PDIF Interface • I/O Stake Headers • 1.8-3.3V Logic Interface • Layout and Grounding Recommendations

598-1005-ND (CDB42L51) **$660.00**

Analog-to-Digital Converters

CS5381 Evaluation Board

The CDB5381 evaluation board is an excellent means for quickly evaluating the CS5381 24-bit, stereo A/D converter. Evaluation requires a digital signal analyzer, an analog signal source, and a power supply. Also included is a CS8406 digital audio interface transmitter which generates S/PDIF, and EIAJ-340 compatible audio data. The digital audio data is available via RCA phono and optical connectors.

Features:

• Demonstrates recommended layout and grounding arrangements • CS8406 generates S/PDIF and EIAJ-340 compatible digital audio

598-1008-ND (CDB5381) **$360.00**

CS5451A Evaluation Board and Software

This is an inexpensive tool designed to evaluate the functionality/performance of the CS5451A 6-channel A/D Converter. Six terminal block connectors serve as inputs to the CS5451A's six analog input pairs. It includes an optional voltage reference source. A 4.096MHz crystal is provided as a source for the CS5451A XIN pin, or an external clock source can be supplied by the user. Digital output data from the CS5451A is transferred to the user's PC via the included 25-pin parallel port cable.

The CDB5451A includes PC software, allowing the user to perform data capture (includes option for time domain analysis, histogram analysis and frequency domain analysis). The software also allows real-time RMS calculation/analysis to be performed simultaneously on all six channels.

Features:

• Direct Shunt Sensor and Current Transformer Interface for 3-Phase Power • On-Board Voltage Reference • On-Board Crystal for XIN

598-1009-ND (CDB5451A) **$495.00**

(Continued)

CS5466 Evaluation Board

The CS5466 is a low cost power/energy IC with pulse output for power measurement solutions. The CDB5466U Evaluation Board is an inexpensive tool designed to evaluate the functionality and performance of the CS5466.

The evaluation board is designed to output energy-to-pulse conversions upon power up. It includes a microcontroller with a USB interface. The microcontroller and GUI (Graphical User Interface) provide a means to quickly register and evaluate the CS5466's energy-to pulse outputs.

Features:

• Active Energy-to-Pulse Conversions • Simple Configuration Jumpers • Energy Pulses • Multiple Supply Voltage Selections • USB Communication with PC • On-Board Voltage Reference

598-1011-ND (CDB5466U) **$495.00**

CS5524 Evaluation Board and Software

The CSB5524 is an inexpensive tool designed to evaluate the performance of the CS5524 Analog-to-Digital Converters (ADC). The board includes a 2.5V voltage reference, an 80C51 microcontroller, an RS232 driver/receiver and firmware. The 8051 controls the serial communication between the evaluation board and the PC via the firmware, thus enabling quick and easy access to all of the CS5524 registers.

It also includes one installed ADC sample and software for Data Capture, Time Domain Analysis, Histogram Analysis and Frequency Domain Analysis.

Features:

• Direct Thermocouple Interface • RS-232 to PC with Test Modes • On-Board 80C51 Microcontroller • On-Board Voltage Reference • Lab Windows/CVI™ Evaluation Software • On-Board Charge Pump Drive Circulatory

598-1012-ND (CDB5524) **$495.00**

CS5529 Evaluation Board and Software

The CDB5529 is a tool designed to evaluate the performance of the CS5529 16-bit Analog-to-Digital Converter (ADC). The board includes an LT1019 voltage reference, an 80C51 microcontroller, an RS232 driver/receiver and firmware. The 8051 controls the serial communication between the evaluation board and the PC visa the firmware, enabling quick and easy access to all of the CS5529's registers.

The CDB5529 also includes software for Time Domain Analysis, Histogram Analysis and Frequency Domain Analysis.

Features: • RS-232 Serial Communication with PC • On-Board 80C51 Microcontroller • On-Board Voltage Reference • Lab Windows/CVI™ Evaluation Software • Integrated RS-232 Test Mode

598-1015-ND (CDB5529) **$495.00**

CS5534 Evaluation Board and Software

The CDB5534U is a tool designed to evaluate the functionality and performance of CS5534. The board includes a C8051F320 microcontroller with a USB interface. The microcontroller controls the serial communication between the evaluation board and the PC via the firmware, enabling quick and easy access to all of the CS5534's registers and functions.

This includes software for Data Capture, Time Domain Analysis, Histogram Analysis and Frequency Domain Analysis.

Features:

• USB Communication with PC • On-Board Microcontroller • On-Board Voltage Reference • Evaluation Software • Interface Header for External Microcontroller

Digital-to-Analog Converters

CS4344 Evaluation Board

This board is an excellent means for quickly evaluating the CS4344 24-bit, 10 pin stereo D/A Converter. The CS8416 digital audio receiver IC provides the system timing necessary to operate the Digital-to-Analog converter and will accept S/PDIF and EIAJ-340 compatible audio data. The board may also be configured to accept external timing and data signals for operation in a user application during system development.

Features:

• Demonstrates recommended layout and grounding arrangements • Header for external PCM audio

598-1006-ND (CDB4344) **$300.00**

CobraNet™

The CobraNet solution leverages the rapid developments in the computer networking industry to provide an increasingly cost effective connectivity solution for audio professionals worldwide. It's based on the highly integrated CS1810xx CobraNet Silicon Series, providing an interface in the form of a compact, low power, low cost module. Featuring 8 or 16 simultaneous channels of digital audio input and output, the CM-2 is designed to be easily integrated into a wide variety of audio products such as signal processors, mixers, amplifiers, ceiling speakers and self-powered loudspeakers.

Features: • 100BASE-TX Ethernet Interface - 100Mbps, full-duplex Ethernet, fully compliant with IEEE 802.3u Standard • Secondary 100BASE-TX Ethernet Interface - redundant network connection for fault tolerance • Quad Synchronous Serial Output Ports - capable of supplying and receiving 8 or 6 channels • TFTP Support - firmware updates over the network • Low Latency - selectable 1.33, 2.66 or 5.33ms across network • Status LEDs - Link, Activity and CobraNet conductor status for each Ethernet jack • Ability to send audio from any CobraNet interface to any other - unlimited addressing, unlimited capacity

CIRRUS LOGIC®

ARM® Engineering Development Kit for the EP9302 Processor

The EDB9302A-Z development kit is a convenient, user-friendly, system-oriented platform that provides engineers with the necessary hardware, software, and drivers to evaluate and utilize the EP9302 processor capabilities, features and state-of-the-art technology. Performance is provided by a 200MHz ARM920T processor and features highly integrated peripheral interfaces.

Applications: • Digital Media Servers • Jukeboxes • Telematic Control Systems • Set-Top Boxes • Point-of-Sale Terminals • Industrial Controls • Biometric Security Systems • GPS Devices • Touch screens • Highly integrated Remote Controls

EDB9302 Platform Support and Features: • EP9302A processor • Linux® and Microsoft Windows® WinCE 4.2 and 5.0 Operating Systems • 32MB of SDRAM • 16MB of Flash Memory • Serial EEPROM interface • Real Time Clock • USB Host and Slave Connector • Two UARTS • Stereo audio input and output • 10/100Mbps Ethernet • IR Receiver • JTAG • Memory bus expansion connector

Downloadable Development Software: • A complete Linux® Operating System with drivers (source code included) • BSP for Microsoft® Windows® WinCE 5.0 Operating Systems with drivers included • Evaluation copies of popular tools • Schematics and Gerbers • User Documentation

Kit Includes: • Quick Start Guide • 4" x 6" form factor EDB9302A-Z Processor Board with 200MHz processor • Microsoft® Windows® WinCE 5.0 Operating System • Power Supply • Serial Cable

Interface and Sample Rate Converters

Evaluation Board for CS8416 and CS8406

The CDB8416 is designed to allow easy evaluation of the CS8416 and CS8406. The board is designed for easy connection to an Audio Precision or other digital audio test system. Input and output data may be set for either balanced using the XLR connectors or unbalanced using the coax or optical connectors. Windows PC software provides a GUI to make configuration easy in software mode. The software communicates through the PC's parallel port to control the internal registers so that all the possible software modes of the CS8416 may be tested.

Features: • CS8416 Digital Audio Receiver • Receives and transmits AES/EBU, S/PDIF and EIAJ-340 compatible digital audio • Analog and Digital 3.3V Supply • 3.3 ~ 5.0V Logic Interface Supply • Operates in stand alone Hardware Mode or computer controlled Software Mode • Balanced and unbalanced inputs available.

598-1017-ND (CDB8416) **$510.00**

Evaluation Board for CS8421

The CDB8421 demonstration board is an excellent means for evaluating the CS8421 sample rate converter. System timing can be provided by the CS8421, by the CS8416 phase-locked to its S/PDIF input, by an I/O stake header or by an on-board oscillator. Digital I/O is available via coaxial (RCA) or optical connectors to the CS8416 and SC8406. All configuration control is handled from onboard switches.

Features: • CS8416 S/PDIF Digital Audio Receiver • CS8406 S/PDIF Digital Audio Transmitter • Header for External Serial Audio I/O • 3.3 ~ 5.0V Logic Interface • No software required to operate

598-1018-ND (CDB8421) **$480.00**

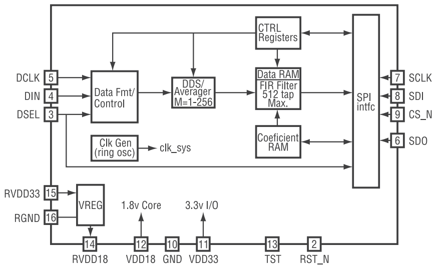
Quickfilter™ Technologies

Programmable Digital Filters

The QF1D512 is a single channel, programmable digital filter designed for seamless insertion in the serial data path of a digital signal or used as an FIR coprossesor. The circuit shows the QF1D512 operating between an ADC and an MCU. The device can be programmed using the Quickfilter Design Software which supports most FIR digital filter configurations. The FIR filter has 512 taps capable of generating "brick wall" filters such as a low pass filter with a 1 kHz cutoff frequency, 140dB of rejection, and a total transition band of only 10 Hz. The filter can operate over a broad range of ADC data rates - from 10sps up to 500ksps and can support ADCs with resolutions ranging from 12 to 24 bits.



The QF4A512 Programmable Signal Converter is a 4-channel, signal conditioner and signal converter. Each channel can be individually programmed for the gain, anti-aliasing filter cutoff frequency, A-to-D sampling frequency, and unique filter requirements. This is accomplished with 4 separate high-precision 512-tap FIR filters. Quickfilter software has been created for rapid device configuration and filter design at performance levels unattainable with analog components.

STATIC PROTECTION

Protection of static sensitive parts is a MUST in today's semiconductor market.
To ensure the quality that Digi-Key customers have come to expect, the Digi-Key static control program includes proper static safety protection in the following areas:

- ***Receiving, Incoming Inspection, and QC***
- ***Order Picking***
- ***Final Inspection***
- ***Packaging and Shipping***

Shielded metallized bags are used in order picking, and 100% recyclable paper packaging is used in packaging and shipping.

As our program is continuously updated with the latest static control technology, you can be reassured that Digi-Key's static sensitive parts are quality safe, *all the way to your door step!*

• *Please Note:* SO-x packages are the same as x-SOIC packages •

NXP Part No.	Digi-Key Part No.	Description	Pkg.	Price Each★ 1	25	100
74LV00N	568-2920-5-ND	Quad 2-Input NAND Gate	14-Dip	.48	.36	.27
74LV04N	568-2921-5-ND	Hex Inverter	14-Dip	.48	.36	.27
74LV08N	568-2922-5-ND	Quad 2-Input AND Gate	14-Dip	.48	.36	.27
74LV14D	568-2928-5-ND	Hex Inverting Schmitt-Trigger	14-SOIC	.44	.36	.25
74LV14N	568-2929-5-ND	Hex Inverting Schmitt-Trigger	14-Dip	.56	.42	.32
74LV27D	568-2952-5-ND	Triple 3-Input NOR Gate	14-SOIC	.66	.50	.38
74LV32N	568-2953-5-ND	Quad 2-Input OR Gate	14-Dip	.48	.36	.27
74LV74N	568-2988-5-ND	Dual D-Type F/F with Set and Reset, Positive-Edge-Triggered	14-Dip	.68	.51	.39
74LV86N	568-2989-5-ND	Quad 2-Input Exclusive OR Gate	14-Dip	.68	.51	.39
74LV123N	568-2923-5-ND	Dual Retriggerable Monostable Multivibrator with Reset	16-Dip	.80	.60	.45
74LV125N	568-2924-5-ND	Tri-State Quad Buffer/Line Driver	14-Dip	.94	.71	.53
74LV132N	568-2925-5-ND	Quad 2-Input NAND Schmitt Trigger	14-Dip	.72	.54	.41
74LV138N	568-2926-5-ND	3-to-8 Line Decoder/Demux	16-Dip	.76	.57	.43
74LV139N	568-2927-5-ND	Dual 2-to-4 Line Decoder/Demux	16-Dip	.76	.57	.43
74LV153D	568-2930-5-ND	Dual 4-Input Multiplexer	16-SOIC	.72	.54	.41
74LV153DB	568-2931-5-ND	Dual 4-Input Multiplexer	16-SSOP	.72	.54	.41
74LV153N	568-2932-5-ND	Dual 4-Input Multiplexer	16-Dip	.72	.54	.41
74LV153PW	568-2933-5-ND	Dual 4-Input Multiplexer	16-TSSOP	.72	.54	.41
74LV164N	568-2934-5-ND	8-Bit Serial-In/Parallel-Out Shift Register	14-Dip	.75	.63	.50
74LV165N	568-2935-5-ND	8-Bit Parallel-In/Serial-Out Shift Register	16-Dip	.75	.63	.50
74LV174N	568-2936-5-ND	Hex D-Type Flip-Flop with Reset, Positive-Edge-Triggered	16-Dip	.92	.69	.52
74LV241D	568-2937-5-ND	Tri-State Octal Buffer/Line Driver	20-SOIC	.78	.65	.52
74LV241DB	568-2938-5-ND	Tri-State Octal Buffer/Line Driver	20-SSOP	.78	.65	.52
74LV241N	568-2939-5-ND	Tri-State Octal Buffer/Line Driver	20-Dip	.78	.65	.52
74LV241PW	568-2940-5-ND	Tri-State Octal Buffer/Line Driver	20-TSSOP	.78	.65	.52
74LV244N	568-2941-5-ND	Tri-State Octal Buffer/Line Driver	20-Dip	.88	.66	.50
74LV245N	568-2942-5-ND	Tri-State Octal Bus Transceiver	20-Dip	.88	.66	.50
74LV251D	568-2943-5-ND	Tri-State 8-Input Multiplexer	16-SOIC	.85	.71	.57
74LV251DB	568-2944-5-ND	Tri-State 8-Input Multiplexer	16-SSOP	.88	.74	.59
74LV251N	568-2945-5-ND	Tri-State 8-Input Multiplexer	16-Dip	.85	.71	.57
74LV251PW	568-2946-5-ND	Tri-State 8-Input Multiplexer	16-TSSOP	.92	.77	.62
74LV259D	568-2947-5-ND	8-Bit Addressable Latch	16-SOIC	.81	.68	.55
74LV259DB	568-2948-5-ND	8-Bit Addressable Latch	16-SSOP	.81	.68	.55
74LV259N	568-2949-5-ND	8-Bit Addressable Latch	16-Dip	.81	.68	.55
74LV259PW	568-2950-5-ND	8-Bit Addressable Latch	16-TSSOP	.81	.68	.55
74LV273N	568-2951-5-ND	Octal D-Type Flip-Flop with Reset, Positive-Edge-Triggered	20-Dip	.88	.66	.50
74LV365D	568-2954-5-ND	Tri-State Hex Buffer/Line Driver	16-SOIC	.96	.72	.54
74LV365DB	568-2955-5-ND	Tri-State Hex Buffer/Line Driver	16-SSOP	.88	.74	.59
74LV365N	568-2956-5-ND	Tri-State Hex Buffer/Line Driver	16-Dip	.88	.74	.59
74LV365PW	568-2957-5-ND	Tri-State Hex Buffer/Line Driver	16-TSSOP	.92	.77	.62
74LV367N	568-2958-5-ND	Tri-State Hex Buffer/Line Driver	16-Dip	.75	.63	.50
74LV373N	568-2959-5-ND	Tri-State Octal D-Type Transparent Latch	20-Dip	.88	.66	.50
74LV374N	568-2960-5-ND	Tri-State Octal D-Type Flip-Flop, Positive-Edge-Triggered	20-Dip	.88	.66	.50
74LV377D	568-2961-5-ND	Octal D-Type F/F with Data Enable, Positive-Edge-Triggered	20-SOIC	.81	.68	.55
74LV377DB	568-2962-5-ND	Octal D-Type F/F with Data Enable, Positive-Edge-Triggered	20-SSOP	.92	.77	.62
74LV377N	568-2963-5-ND	Octal D-Type F/F with Data Enable, Positive-Edge-Triggered	20-Dip	.85	.71	.57
74LV377PW	568-2964-5-ND	Octal D-Type F/F with Data Enable, Positive-Edge Triggered	20-TSSOP	.95	.80	.64
74LV393D	568-2965-5-ND	Dual 4-Bit Binary Ripple Counter	14-SOIC	.78	.65	.52
74LV393DB	568-2966-5-ND	Dual 4-Bit Binary Ripple Counter	14-SSOP	.81	.68	.55
74LV393N	568-2967-5-ND	Dual 4-Bit Binary Ripple Counter	14-Dip	.81	.68	.55
74LV393PW	568-2968-5-ND	Dual 4-Bit Binary Ripple Counter	14-TSSOP	.85	.71	.57
74LV541N	568-2984-5-ND	Tri-State Octal Buffer/Line Driver	20-Dip	1.02	.86	.69
74LV573N	568-2985-5-ND	Tri-State Octal D-Type Transparent Latch	20-Dip	.81	.68	.54
74LV574N	568-2986-5-ND	Tri-State Octal D-Type Flip-Flop, Positive-Edge-Triggered	20-Dip	.81	.68	.54
74LV595N	568-2987-5-ND	8-Bit Serial-In/Serial or Parallel-Out Shift Register	16-Dip	.93	.78	.62
74LV4020D	568-2969-5-ND	14-Stage Binary Ripple Counter	16-SOIC	1.06	.89	.71
74LV4020DB	568-2970-5-ND	14-Stage Binary Ripple Counter	16-SSOP	1.06	.89	.71
74LV4020N	568-2971-5-ND	14-Stage Binary Ripple Counter	16-Dip	1.06	.89	.71
74LV4020PW	568-2972-5-ND	14-Stage Binary Ripple Counter	16-TSSOP	1.06	.89	.71
74LV4060D	568-1572-5-ND	14-Stage Binary Ripple Counter with Oscillator	16-SOIC	1.02	.86	.69
74LV4060DB	568-2973-5-ND	14-Stage Binary Ripple Counter with Oscillator	16-SSOP	1.10	.92	.73
74LV4060N	568-2974-5-ND	14-Stage Binary Ripple Counter with Oscillator	16-Dip	1.06	.89	.71
74LV4060PW	568-2975-5-ND	14-Stage Binary Ripple Counter with Oscillator	16-TSSOP	1.13	.94	.76
